

MCA in Data Science & VisualizationLNCT University | Best Private University in Central India

Data Science has gained popularity in the recent past. Data science deals in converting a huge amount of raw data to provide meaningful insights and strategy. The data is gathered from many sources, then it is structured and studied to gain insights. The process of drawing the key insights from structured and unstructured data is known as “Data Science”. The professionals working on gaining such insights and presenting them to key stakeholders are known as “Data Analysts” and “Data Scientists“. Today, data science finds its place in retail, finance, e-commerce, healthcare, and IT services industries.

The graduate & Post graduate Engineering programmers in Data Science at LNCTU University are about providing an innovative education filled with discovery, and dissemination of knowledge. The programmers allow fresher's to gain a practical understanding of different Artificial Intelligence & Machine Learning functions and to grow individual networks through cross-functional relationships. From Data Science engineering , there are various programmes for the students' addressing their interest. Students get to learn under the supervision of highly adept and experienced faculty teams developing the skills you need to succeed and make a valuable contribution right from the start. The graduate & post graduate engineering programmes encourage students to think with internal perspective and design solutions that meet human and social needs and to create an economic value that helps them to sustain in this competitive environment
