

About B.Pharm

B.Pharm program is an undergraduate program, which is taught for four years and eight semesters. In B.Pharm, various subjects are taught such as medicines and their uses, medicinal chemistry, drug formulation, and drug research. After learning these subjects, students can make a good career. As one of the best colleges for Bachelors in Pharmacy, Sandip University has dedicated labs for pharmaceutical students to help them hone their skills.

Sandip University also collaborates with industry experts to design an industry-synced curriculum for the B.Pharm program. This program is the first step towards pursuing further education in pharmaceutical science. After completing this program, students can either join the industry as employable professionals or pursue postgraduate programs in pharmacy.
