Manager of accounting

An expert on bioterrorism

Consultant in alternative energy

Future scope of MBA (Agriculture & Food Business)

A large portion of our lives is spent on eating, sleeping, and working. Yet, India, with the world's second-largest agricultural land, is a country that is based on agriculture. The reason for this is quite straightforward. The land is rich, fertile, and conducive to agriculture.

India's population is not only supplied with enough food by our agricultural products, but we are also the world's largest exporter of these products. As a result, agriculture is expected to remain a major source of income for most of India's citizens in the future.

It will only get better as the government develops the new program for farmers and the agriculture sector.

Furthermore, large corporations are spending a lot of money developing new techniques and machines to make the work more efficient and faster.

Important highlights of MBA (Agriculture & Food Business)

Farming is more than a way to earn money and feed people. Crops are grown in a scientifically sound manner to ensure favourable results. But, of course, its importance is often undervalued. The following are a few of the most important things it takes care of:

Agribusiness includes seed assembly, fermentation, sourcing raw food products, and supplying them with minimal waste.

Manufacturing companies such as equipment manufacturers, chemical manufacturers, and logistics providers are examples of this.

The entire system could collapse with no proper infrastructure, leaving people without their most basic need: FOOD.
