

Computer Science is one discipline which continuously evolves in a breath taking pace. Everyday technological advancements obsoletes yesterday's development into history. In this reverberating and happening discipline, it is important that the academia keeps pace with the multifaceted, overwhelming technological advancements and produces work force to lead and spearhead the technological growth – be it in academia, industry or research. The Master's degree in Computer Science & Engineering is designed to instil and equip students with the state of the art knowledge required to be a successful human resource in either academia, industry or research careers.
