

VIT®

Vellore Institute of Technology
(Deemed to be University under section 3 of UGC Act, 1956)

School of Computer Science and Engineering

CURRICULUM AND SYLLABI (2023-2024)

B. Tech. Computer Science and Engineering with Specialization in Data Science

VISION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

Transforming life through excellence in education and research.

MISSION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

World class Education: Excellence in education, grounded in ethics and critical thinking, for improvement of life.

Cutting edge Research: An innovation ecosystem to extend knowledge and solve critical problems.

Impactful People: Happy, accountable, caring and effective workforce and students.

Rewarding Co-creations: Active collaboration with national & international industries & universities for productivity and economic development.

Service to Society: Service to the region and world through knowledge and compassion.

VISION STATEMENT OF THE SCHOOL OF COMPUTER SCIENCE AND ENGINEERING

To be a world-renowned centre of education, research and service in computing and allied domains.

MISSION STATEMENT OF THE SCHOOL OF COMPUTER SCIENCE AND ENGINEERING

- To offer computing education programs with the goal that the students become technically competent and develop lifelong learning skill.
- To undertake path-breaking research that creates new computing technologies and solutions for industry and society at large.
- To foster vibrant outreach programs for industry, research organizations, academia and society.

B.Tech-CSE (Spl. in Data Science)

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

1. Graduates will be engineering practitioners and leaders, who would help solve industry's technological problems.
2. Graduates will be engineering professionals, innovators or entrepreneurs engaged in technology development, technology deployment, or engineering system implementation in industry.
3. Graduates will function in their profession with social awareness and responsibility.
4. Graduates will interact with their peers in other disciplines in industry and society and contribute to the economic growth of the country.
5. Graduates will be successful in pursuing higher studies in engineering or management.
6. Graduates will pursue career paths in teaching or research.

B.Tech-CSE (Spl. in Data Science)

PROGRAMME OUTCOMES (POs)

PO_01: Having an ability to apply mathematics and science in engineering applications.

PO_02: Having a clear understanding of the subject related concepts and of contemporary issues and apply them to identify, formulate and analyse complex engineering problems.

PO_03: Having an ability to design a component or a product applying all the relevant standards and with realistic constraints, including public health, safety, culture, society and environment

PO_04: Having an ability to design and conduct experiments, as well as to analyse and interpret data, and synthesis of information

PO_05: Having an ability to use techniques, skills, resources and modern engineering and IT tools necessary for engineering practice

PO_06: Having problem solving ability- to assess social issues (societal, health, safety, legal and cultural) and engineering problems

PO_07: Having adaptive thinking and adaptability in relation to environmental context and sustainable development

PO_08: Having a clear understanding of professional and ethical responsibility

PO_09: Having cross cultural competency exhibited by working as a member or in teams

PO_10: Having a good working knowledge of communicating in English – communication with engineering community and society

PO_11: Having a good cognitive load management skills related to project management and finance

PO_12: Having interest and recognise the need for independent and lifelong learning

VIT[®]

Vellore Institute of Technology
(Deemed to be University under section 3 of UGC Act, 1956)

B.Tech-CSE (Spl. in Data Science)

PROGRAMME SPECIFIC OUTCOMES (PSOs)

1. Apply computing theory, languages and algorithms, as well as mathematical and statistical models, and the principles of optimization to appropriately formulate and use data analysis.
2. Apply the principles and techniques of database design, administration, and implementation to enhance data collection capabilities and decision-support systems. Ability to critique the role of information and analytics in supporting business processes and functions.
3. Invent and use appropriate models of data analysis, assess the quality of input, derive insight from results, and investigate potential issues. Also to organize big data sets into meaningful structures, incorporating data profiling and quality standards.

FOUNDATION CORE

(2023-2024)

B.Tech. Computer Science and Engg with Spec. in Data Science

Foundation Core

BCHY101L	Engineering Chemistry	L	T	P	C		
		3	0	0	3		
Pre-requisite	NIL	Syllabus version		1.0			
Course Objectives							
<ol style="list-style-type: none"> To enable students to have fundamental understanding of the basic concepts of different disciplines of chemistry. To provide avenues for learning advanced concepts from school to university To empower students with emerging concepts in applied chemistry to be useful in addressing societal needs To integrate analytical and computational ability with experimental skills to create individuals competent in basic science and its by-product of its application. To offer opportunities to create pathways for self-reliant in terms of knowledge and higher learning 							
Course Outcomes :							
<ol style="list-style-type: none"> Understand the fundamental concepts in organic, inorganic, physical, and analytical chemistry. Analyze the principles of applied chemistry in solving the societal issues. Apply chemical concepts for the advancement of materials. Appreciate the fundamental principles of spectroscopy and the related applications. Design new materials, energy conversion devices and new protective coating techniques. 							
Module:1	Chemical thermodynamics and kinetics	6 hours					
Laws of thermodynamics - entropy change (selected processes) – spontaneity of a chemical reaction and Gibbs free energy - heat transfer; Kinetics - Concept of activation energy and energy barrier - Arrhenius equation- effect of catalysts (homo and heterogeneous) – Enzyme catalysis (Michaelis-Menten Mechanism).							
Module:2	Metal complexes and organometallics	6 hours					
Inorganic complexes - structure, bonding and application; Organometallics – introduction, stability, structure and applications of metal carbonyls, ferrocene and Grignard reagent; Metals in biology (haemoglobin, chlorophyll- structure and property).							
Module:3	Organic intermediates and reaction transformations	6 hours					
Organic intermediates - stability and structure of carbocations, carbanions and radicals; Aromatics (aromaticity) and heterocycles (3, 4, 5, 6 membered and fused systems); Organic transformations for making useful drugs for specific disease targets (two examples) and dyes (addition, elimination, substitution and cross coupling reactions).							
Module:4	Energy devices	6 hours					
Electrochemical and electrolytic cells – electrode materials with examples (semi-conductors), electrode-electrolyte interface- chemistry of Li ion secondary batteries, supercapacitors; Fuel cells: H ₂ -O ₂ and solid oxide fuel cell (SOFC); Solar cells - photovoltaic cell (silicon based), photoelectrochemical cells and dye-sensitized cells.							
Module:5	Functional materials	7 hours					
Oxides of AB, AB ₂ , ABO ₃ type (specific examples); Composites - types and properties; Polymers - thermosetting and thermoplastic polymers – synthesis and application (TEFLON, BAKELITE); Conducting polymers- polyacetylene and effect of doping – chemistry of display devices specific to OLEDs; Nano materials – introduction, bulk vs nano (quantum dots), top-down and bottom-up approaches for synthesis, and properties of nano Au.							
Module:6	Spectroscopic, diffraction and microscopic techniques	5 hours					
Fundamental concepts in spectroscopic and instrumental techniques; Principle and applications of UV-Visible and XRD techniques (numericals); Overview of various techniques such as AAS, IR, NMR, SEM and TEM.							
Module:7	Industrial applications	7 hours					

Water purification methods - zeolites, ion-exchange resins and reverse osmosis; Fuels and combustion -LCV, HCV, Bomb calorimeter (numericals), anti-knocking agents); Protective coatings for corrosion control: cathodic and anodic protection - PVD technique; Chemical sensors for environmental monitoring - gas sensors; Overview of computational methodologies: energy minimization and conformational analysis.		
Module:8 Contemporary topics		2 hours
Guest lectures from Industry and, Research and Development Organizations		
	Total Lecture hours:	45 hours
Textbook		
1.	Theodore E. Brown, H Eugene, LeMay Bruce E. Bursten, Catherine Murphy, Patrick Woodward, Matthew E. Stoltzfus, Chemistry: The Central Science, 2017, 14th edition, Pearson Publishers, 2017. UK	
Reference Books		
1.	Peter Vollhardt, Neil Schore, Organic Chemistry: Structure and Function, 2018, 8th ed. WH Freeman, London	
2.	Atkins' Physical Chemistry: International, 2018, Eleventh edition, Oxford University Press; UK	
3.	Colin Banwell, Elaine McCash, Fundamentals for Molecular Spectroscopy, 4th Edition, McGraw Hill, US	
4.	Solid State Chemistry and its Applications, Anthony R. West. 2014, 2nd edition, Wiley, UK.	
5.	Angèle Reinders, Pierre Verlinden, Wilfried van Sark, Alexandre Freundlich, Photovoltaic solar energy: From fundamentals to Applications, 2017, Wiley publishers, UK.	
6.	Lawrence S. Brown and Thomas Holme, Chemistry for engineering students, 2018, 4 th edition – Open access version	
Mode of Evaluation: CAT, Written assignment, Quiz and FAT		
Recommended by Board of Studies	28.06.2021	
Approved by Academic Council	No. 63	Date 23.09.2021

BCHY101P	Engineering Chemistry Lab	L	T	P	C								
		0	0	2	1								
Pre-requisite	NIL	Syllabus version											
		1.0											
Course Objective													
To apply theoretical knowledge gained in the theory course and get hands-on experience of the topics.													
Course Outcome :													
At the end of the course the student will be able to													
<ol style="list-style-type: none"> 1. Understand the importance and hands-on experience on analysis of metal ions by means of experiments. 2. Get practical experience on synthesis and characterization of the organic molecules and nanomaterials in the laboratory. 3. Apply their knowledge in thermodynamic functions, kinetics and molecular geometries through the experiments. 													
Indicative Experiments													
1.	Thermodynamics functions from EMF measurements : Zinc – Copper system												
2.	Determination of reaction rate, order and molecularity of ethylacetate hydrolysis												
3.	Colorimetric estimation of Ni ²⁺ using conventional and smart phone digital-imaging methods												
4.	Laboratory scale preparation of important drug intermediate - para aminophenol for the synthesis for acetaminophen												
5.	Magnesium-sea water activated cell – Effect of salt concentration on voltage generation												
6.	Analysis of iron in an alloy sample by potentiometry												
7.	Preparation of tin oxide by sol- gel method and its characterization												
8.	Size dependent colour variation of Cu ₂ O nanoparticles by spectrophotometer												
9.	Determination of hardness of water sample by complexometric titration before and after ion-exchange process												
10.	Computational Optimization of molecular geometry using Avogadro software												
Total Laboratory Hours													
30 hours													
Mode of assessment: Mode of assessment: Continuous assessment / FAT / Oral examination and others													
Recommended by Board of Studies	28.06.2021												
Approved by Academic Council	No. 63	Date	23.09.2021										

BCSE101E	Computer Programming: Python	L	T	P	C				
		1	0	4	3				
Pre-requisite	NIL	Syllabus version							
		1.0							
Course Objectives									
1. To provide exposure to basic problem-solving techniques using computers. 2. To inculcate the art of logical thinking abilities and propose novel solutions for real world problems through programming language constructs.									
Course Outcome									
1. Classify various algorithmic approaches, categorize the appropriate data representation, and demonstrate various control constructs. 2. Choose appropriate programming paradigms, interpret and handle data using files to propose solution through reusable modules; idealize the importance of modules and packages.									
Module:1	Introduction to Problem Solving	1 hour							
Problem Solving: Definition and Steps, Problem Analysis Chart, Developing an Algorithm, Flowchart and Pseudocode.									
Module:2	Python Programming Fundamentals	2 hours							
Introduction to python – Interactive and Script Mode – Indentation – Comments – Variables – Reserved Words – Data Types – Operators and their precedence – Expressions – Built-in Functions – Importing from Packages.									
Module:3	Control Structures	2 hours							
Decision Making and Branching: if, if-else, nested if, multi-way if-elif statements – Looping: while loop, for loop – else clauses in loops, nested loops – break, continue and pass statements.									
Module:4	Collections	3 hours							
Lists: Create, Access, Slicing, Negative indices, List methods, List comprehensions – Tuples: Create, Indexing and slicing, Operations on tuples – Dictionary: Create, add, and replace values, Operations on dictionaries – Sets: Creation and operations.									
Module:5	Strings and Regular Expressions	2 hours							
Strings: Comparison, Formatting, Slicing, Splitting, Stripping – Regular Expressions: Matching, Search and replace, Patterns.									
Module:6	Functions and Files	3 hours							
Functions – Parameters and Arguments: Positional arguments, Keyword arguments, Parameters with default values – Local and Global scope of variables – Functions with Arbitrary arguments – Recursive Functions – Lambda Function. Files: Create, Open, Read, Write, Append and Close – tell and seek methods.									
Module:7	Modules and Packages	2 hours							
Built-in modules – User-Defined modules – Overview of Numpy and Pandas packages.									
		Total Lecture hours:							
		15 hours							
Text Book(s)									
1.	Eric Matthes, Python Crash Course: A Hands-On, Project-Based Introduction to Programming, 2nd Edition, No starch Press, 2019								
Reference Books									
1.	Martic C Brown, Python: The Complete Reference, 4th Edition, McGraw Hill Publishers, 2018.								
2.	John V. Guttag, Introduction to computation and programming using python: with applications to understanding data. 2nd Edition, MIT Press, 2016.								

Mode of Evaluation: No separate evaluation for theory component.			
Indicative Experiments			
1. Problem Analysis Chart, Flowchart and Pseudocode Practices.			
2. Sequential Constructs using Python Operators, Expressions.			
3. Branching (if, if-else, nested if, multi-way if-elif statements) and Looping (for, while, nested looping, break, continue, else in loops).			
4. List, Tuples, Dictionaries & Sets.			
5. Strings, Regular Expressions.			
6. Functions, Lambda, Recursive Functions and Files.			
7. Modules and Packages (NumPy and Pandas)

BCSE102L	Structured and Object-Oriented Programming	L	T	P	C			
		2	0	0	2			
Pre-requisite	NIL	Syllabus version						
		1.0						
Course Objectives								
<ol style="list-style-type: none"> 1. To impart the basic constructs in structured programming and object-oriented programming paradigms. 2. To inculcate the insights and benefits in accessing memory locations by implementing real world problems. 3. To help solving real world problems through appropriate programming paradigms. 								
Course Outcome								
At the end of the course, students should be able to:								
<ol style="list-style-type: none"> 1. Understand different programming language constructs and decision-making statements; manipulate data as a group. 2. Recognize the application of modular programming approach; create user defined data types and idealize the role of pointers. 3. Comprehend various elements of object-oriented programming paradigm; propose solutions through inheritance and polymorphism; identify the appropriate data structure for the given problem and devise solution using generic programming techniques. 								
Module:1	C Programming Fundamentals	2 hours						
Variables - Reserved words – Data Types – Operators – Operator Precedence - Expressions - Type Conversions - I/O statements - Branching and Looping: if, if-else, nested if, if-else ladder, switch statement, goto statement - Loops: for, while and do...while – break and continue statements.								
Module:2	Arrays and Functions	4 hours						
Arrays: One Dimensional array - Two-Dimensional Array – Strings and its operations. User Defined Functions: Declaration – Definition – call by value and call by reference - Types of Functions - Recursive functions - Storage Classes - Scope, Visibility and Lifetime of Variables.								
Module:3	Pointers	4 hours						
Declaration and Access of Pointer Variables, Pointer arithmetic – Dynamic memory allocation – Pointers and arrays - Pointers and functions.								
Module:4	Structure and Union	2 hours						
Declaration, Initialization, Access of Structure Variables - Arrays of Structure - Arrays within Structure - Structure within Structures - Structures and Functions – Pointers to Structure -								
Module:5	Overview of Object-Oriented Programming	5 hours						
Features of OOP - Classes and Objects - “this” pointer - Constructors and Destructors - Static Data Members, Static Member Functions and Objects - Inline Functions – Call by reference - Functions with default Arguments - Functions with Objects as Arguments - Friend Functions and Friend Classes.								
Module:6	Inheritance	5 hours						
Inheritance - Types of Inheritance: Single inheritance, Multiple Inheritance, Multi-level								

Inheritance, Hierarchical Inheritance - Multipath Inheritance - Inheritance and constructors.		
Module:7	Polymorphism	4 hours
Function Overloading - Operator Overloading – Dynamic Polymorphism - Virtual Functions - Pure virtual Functions - Abstract Classes.		
Module:8	Generic Programming	4 hours
Function templates and class templates, Standard Template Library.		
	Total Lecture hours:	30 hours

BCSE103E	Computer Programming : Java	L	T	P	C			
		1	0	4	3			
Pre-requisite	NIL	Syllabus version						
		1.0						
Course Objectives:								
<ol style="list-style-type: none"> 1. To introduce the core language features of Java and understand the fundamentals of Object -Oriented programming in Java. 2. To develop the ability of using Java to solve real world problems. 								
Course Outcome:								
At the end of this course, students should be able to:								
<ol style="list-style-type: none"> 1. Understand basic programming constructs; realize the fundamentals of Object Orientated Programming in Java; apply inheritance and interface concepts for enhancing code reusability. 2. Realize the exception handling mechanism; process data within files and use the data structures in the collection framework for solving real world problems. 								
Module:1	Java Basics	2 hours						
OOP Paradigm - Features of Java Language - JVM - Bytecode - Java program structure – Basic programming constructs - data types - variables – Java naming conventions – operators.								
Module:2	Looping Constructs and Arrays	2 hours						
Control and looping constructs - Arrays – one dimensional and multi-dimensional – enhanced for loop – Strings - Wrapper classes.								
Module:3	Classes and Objects	2 hours						
Class Fundamentals – Access and non-access specifiers - Declaring objects and assigning object reference variables – array of objects – constructors and destructors – usage of “this” and “static” keywords.								
Module:4	Inheritance and Polymorphism	3 hours						
Inheritance – types -- use of “super” – final keyword - Polymorphism – Overloading and Overriding - abstract class – Interfaces.								
Module:5	Packages and Exception Handling	2 hours						
Packages: Creating and Accessing - Sub packages. Exception Handling - Types of Exception - Control Flow in Exceptions - Use of try, catch, finally, throw, throws in Exception Handling - User defined exceptions.								
Module:6	IO Streams and Files	2 hours						
Java I/O streams – FileInputStream & FileOutputStream – FileReader & FileWriter- DataInputStream & DataOutputStream – BufferedInputStream & BufferedOutputStream – PrintOutputStream - Serialization and Deserialization.								
Module:7	Collection Framework	2 hours						
Generic classes and methods - Collection framework: List and Map.

Course Code	Course Title	L	T	P	C
BEEE102L	Basic Electrical and Electronics Engineering	3	0	0	3
Pre-requisite	NIL	Syllabus version			
		1.0			

Course Objectives

1. Familiarize with various laws and theorems to solve electric and electronic circuits
 2. Provide an overview on working principle of machines
 3. Excel the concepts of semiconductor devices, op-amps and digital circuits

Course Outcomes

On completion of the course, the students will be able to:

1. Evaluate DC and AC circuit parameters using various laws and theorems
 2. Comprehend the parameters of magnetic circuits
 3. Classify and compare various types of electrical machines and its applications
 4. Design basic combinational circuits in digital system
 5. Analyze the characteristics and applications of semiconductor devices

Module:1 DC Circuits **7 hours**

Basic circuit elements and sources; Ohms law; Kirchhoff's laws; Series and Parallel connection of circuit elements; Star-delta transformation; Mesh current analysis; Node voltage analysis; Theorems: Thevenin's, Maximum power transfer and Superposition theorem.

Module:2	AC Circuits	8 hours
-----------------	--------------------	----------------

Alternating voltages and currents, RMS, average, maximum values, Single Phase RL, RC, RLC series circuits, Power in AC circuits, Power Factor, Three phase balanced systems, Star and delta Connections, Electrical Safety, Fuses and Earthing.

Module:3 Magnetic Circuits **7 hours**

Magnetic field; Toroidal core: Flux density, Flux linkage; Magnetic circuit with airgap; Reluctance in series and parallel circuits; Self and mutual inductance; Transformer: turn ratio determination.

Module:4 Electrical Machines **7 hours**

Construction, working principle and applications of DC Machines, Transformers, Three phase Induction motors, synchronous generators, single phase induction motors, special machines stepper motor, universal motor and BLDC motor.

Module:5 Digital Systems **7 hours**

Binary arithmetic; Number base conversion; Boolean algebra: simplification of Boolean functions using K-maps; Logic gates; Design of basic combinational circuits: adders, multiplexers, de-multiplexers.

Module:6 Semiconductor Devices and Applications **7 hours**

Characteristics: PN junction diode, Zener diode, BJT, MOSFET; **Applications:** Rectifier, Voltage regulator, Operational amplifier.

Module:7 Contemporary Issues **2 hours**

For more information about the study, please contact Dr. John Smith at (555) 123-4567 or via email at john.smith@researchinstitute.org.

BEEE102P	Basic Electrical and Electronics Engineering Lab	0	0	2	1				
Pre-requisite	Nil	Syllabus version		1.0					
Course Objective									
1. Design and solve the fundamental electrical and electronics circuits									
Course Outcomes									
1. Identify appropriate method of solving the fundamental electrical and electronics circuits									
2. Design and conduct experiments on electrical and electronics circuits									
Experiments (Indicative)									
1	Verification of Kirchoff's law								
2	Verification of Maximum Power Transfer Theorem								
3	Staircase wiring circuit layout for multi storage building								
4	Lamp dimmer circuit (Darlington pair circuit using transistors) used in cars.								
5	Measurement of Earth resistance using Megger								
6	Sinusoidal steady state response of RLC circuits								
7	Three phase power measurement for ac loads								
8	Design of half-adder and full-adder digital circuits								
9	Synthesis of 8x1 multiplexer and 1x8 de-multiplexers								
10	Characteristics of PN diode and acts as switch								
11	Realization of single-phase rectifier								
12	Design of regulated power supply using Zener diode.								
13	Characteristics of MOSFET								
14	Characteristics of BJT								
15	Measurement of energy using single-phase energy meter								
16	Measurement of power in a 1-phase circuit by using CTs and PTs

BENG101L	Technical English Communication	L	T	P	C				
		2	0	0	2				
Pre-requisite	NIL	Syllabus version							
		1.0							
Course Objectives:									
<ol style="list-style-type: none"> 1. To develop LSRW skills for effective communication in professional situations 2. To enhance knowledge of grammar and vocabulary for meaningful communication 3. To understand information from diverse texts for effective technical communication 									
Course Outcomes:									
<ol style="list-style-type: none"> 1. Use grammar and vocabulary appropriately while writing and speaking 2. Apply the concepts of communication skills in formal and informal situations 3. Demonstrate effective reading and listening skills to synthesize and draw intelligent inferences 4. Write clearly and significantly in academic and general contexts 									
Module:1	Introduction to Communication	4 hours							
Nature and Process - Types of communication: Intra-personal, Interpersonal, Group-verbal and non-verbal communication / Cross-cultural Communication - Communication Barriers and Essentials of good communication - Principles of Effective Communications									
Module:2	Grammatical Aspects	4 hours							
Sentence Pattern - Modal Verbs - Concord (SVA) - Conditionals - Error detection									
Module:3	Written Correspondence	4 hours							
Job Application Letters - Resume Writing - Statement of Purpose									
Module:4	Business Correspondence	4 hours							
Business Letters: Calling for Quotation, Complaint & Sales Letter – Memo - Minutes of Meeting - Describing products and processes									
Module:5	Professional Writing	4 hours							
Paraphrasing & Summarizing - Executive Summary - Structure and Types of Proposal – Recommendations									
Module:6	Team Building & Leadership Skills	4 hours							
Principles of Leadership - Team Leadership Model - Negotiation Skills - Conflict Management									
Module:7	Research Writing	4 hours							
Interpreting and Analysing a research article - Approaches to Review Paper Writing - Structure of a research article - Referencing									
Module:8	Guest Lecture from Industry and R&D organizations	2 hours							
Contemporary Issues									
Total Lecture hours: 30 hours

BENG101P	Technical English Communication Lab	L	T	P	C				
		0	0	2	1				
Pre-requisite	NIL	Syllabus version							
		1.0							
Course Objectives:									
1. To use appropriate grammatical structures in professional communication 2. To improve English communication skills for better employability 3. To enhance meaningful communication skills in writing and public speaking									
Course Outcomes:									
1. Demonstrate professional rhetoric and articulate ideas effectively 2. Interpret material on technology and deliver eloquent presentations 3. Apply receptive and productive skills in real life situations and develop workplace communication									
Indicative Experiments									
1.	Grammar & Vocabulary Error Detection Activity: -Worksheets								
2.	Listening to Narratives Interviews of eminent personalities & Ted Talks Activity: Listening Comprehension / Summarising								
3.	Video Resume SWOT Analysis & digital resume techniques Activity: Preparing a digital résumé for mock interview								
4.	Product & Process Description Describing and Sequencing Activity: Demonstration of product and process								
5.	Mock Meetings Types of meetings and meeting etiquette Activity: Conduct of meetings and drafting minutes of the meeting								
6.	Reading research article Scientific and Technical articles Activity: Writing Literature review								
7.	Analytical Reading Case Studies on Communication, Team Building and Leadership Activity: Group Discussion								
8.	Presentations Preparing Conference/Seminar paper Activity: Individual/ Group presentations								
9.	Intensive Listening Scientific documentaries Activity: Note taking and Summarising								
10.	Interview Skills Interview questions and techniques Activity: Mock Interviews

BENG102P	Technical Report Writing	L 0	T 0	P 2	C 1			
Pre-requisite	Technical English Communication	Syllabus version			1.0			
Course Objectives:								
1. To augment specific writing skills for preparing technical reports 2. To think critically, evaluate, analyse general and complex technical information 3. To acquire proficiency in writing and presenting reports								
Course Outcomes:								
1. Write error free sentences using appropriate grammar, vocabulary and style 2. Synthesize information and concepts in preparing reports 3. Demonstrate the ability to write and present reports on diverse topics								
Indicative Experiments								
1.	Advanced Grammar, Vocabulary and Editing Usage of Tenses - Adjectives and Adverbs - Jargon vs Technical Vocabulary – Abbreviations - Mechanics of Editing: Punctuation and Proof Reading Activity: Worksheets							
2.	Research and Analyses Synchronise Technical Details from Newspapers - Magazines - Articles and e-content Activity: Writing introduction and literature review							
3.	Systematisation of Information Techniques to Converge Objective-Oriented data in Diverse Technical Reports Activity: Preparing Questionnaire							
4.	Data Visualisation Interpreting Data - Graphs - Tables – Charts - Imagery - Infographics Activity: Transcoding							
5.	Introduction to Reports Meaning - Definition - Purpose - Characteristics and Types of Reports Activity: Worksheets on Types of reports							
6.	Structure of Reports Title – Preface – Acknowledgement - Abstract/Summary – Introduction - Materials and Methods – Results – Discussion - Conclusion - Suggestions/Recommendations Activity: Identifying the structure of report							
7.	Report Writing Data Collection - Draft an Outline and Organize Information Activity: Drafting reports							
8.	Supplementary Texts Appendix – Index – Glossary – References – Bibliography - Notes Activity: Organizing supplementary texts							
9.	Review of Final Reports Structure – Content – Style - Layout and Referencing Activity: Examining clarity and coherence in final reports							
10.	Presentation Presenting Technical Reports Activity: Planning, creating and digital presentation of reports	Total Laboratory Hours						
Mode of assessment: Continuous Assessment / FAT / Assignments / Quiz / Presentations / Oral examination

BMAT101L	Calculus	L	T	P	C			
		3	0	0	3			
Pre-requisite	Nil	Syllabus version						
		1.0						
Course Objectives								
<p>1. To provide the requisite and relevant background necessary to understand the other important engineering mathematics courses offered for Engineers and Scientists.</p> <p>2. To introduce important topics of applied mathematics, namely Single and Multivariable Calculus and Vector Calculus etc.</p> <p>3. Enhance to use technology to model the physical situations into mathematical problems, experiment, interpret results, and verify conclusions.</p>								
Course Outcomes								
At the end of the course the student should be able to:								
<p>1. Apply single variable differentiation and integration to solve applied problems in engineering and find the maxima and minima of functions</p> <p>2. Evaluate partial derivatives, limits, total differentials, Jacobians, Taylor series and optimization problems involving several variables with or without constraints</p> <p>3. Evaluate multiple integrals in Cartesian, Polar, Cylindrical and Spherical coordinates.</p> <p>4. Use special functions to evaluate various types of integrals.</p> <p>5. Understand gradient, directional derivatives, divergence, curl, Green's, Stokes and Gauss Divergence theorems.</p>								
Module:1	Single Variable Calculus	8 hours						
Differentiation- Extrema on an Interval Rolle's Theorem and the Mean value theorem-Increasing and decreasing functions.-First derivative test-Second derivative test-Maxima and Minima-Concavity. Integration-Average function value - Area between curves - Volumes of solids of revolution.								
Module:2	Multivariable Calculus	5 hours						
Functions of two variables-limits and continuity-partial derivatives –total differential-Jacobian and its properties.								
Module:3	Application of Multivariable Calculus	5 hours						
Taylor's expansion for two variables–maxima and minima–constrained maxima and minima-Lagrange's multiplier method.								
Module:4	Multiple integrals	8 hours						
Evaluation of double integrals–change of order of integration–change of variables between Cartesian and polar co-ordinates - evaluation of triple integrals–change of variables between Cartesian and cylindrical and spherical co-ordinates.								
Module:5	Special Functions	6 hours						
Beta and Gamma functions–interrelation between beta and gamma functions-evaluation of multiple integrals using gamma and beta functions. Dirichlet's integral -Error functions complementary error functions.								
Module:6	Vector Differentiation	5 hours						
Scalar and vector valued functions – gradient, tangent plane–directional derivative-divergence and curl–scalar and vector potentials. Statement of vector identities-simple problems.								
Module:7	Vector Integration	6 hours						
Line, surface and volume integrals - Statement of Green's, Stoke's and Gauss divergence theorems -verification and evaluation of vector integrals using them.								
Module:8	Contemporary Topics	2 hours						
Guest lectures from Industry and, Research and Development Organizations								
		Total Lecture hours:			45 hours

BMAT101P	Calculus Lab	L	T	P	C			
		0	0	2	1			
Pre-requisite	NIL	Syllabus version						
		1.0						
Course Objectives								
1. To familiarize with the basic syntax, semantics and library functions of MATLAB which serves as a tool not only in calculus but also many courses in engineering and sciences 2. To visualize mathematical functions and its related properties. 3. To evaluate single and multiple integrals and understand it graphically.								
Course Outcomes								
At the end of the course the student should be able to: 1. Demonstrate MATLAB code for challenging problems in engineering 2. Using plots/displays, interpret and illustrate elementary mathematical functions and procedures.								
Indicative Experiments								
1.	Introduction to MATLAB through matrices and general Syntax							
2.	Plotting and visualizing curves and surfaces in MATLAB – Symbolic computations using MATLAB							
3.	Evaluating Extremum of a single variable function							
4.	Understanding integration as Area under the curve							
5.	Evaluation of Volume by Integrals (Solids of Revolution)							
6.	Evaluating maxima and minima of functions of two variables							
7.	Applying Lagrange multiplier optimization method							
8.	Evaluating Volume under surfaces							
9.	Evaluating triple integrals							
10.	Evaluating gradient, curl and divergence							
11.	Evaluating line integrals in vectors							
12.	Applying Green's theorem to real world problems

BMAT102L	Differential Equations and Transforms	L	T	P	C			
		3	1	0	4			
Pre-requisite	BMAT101L, BMAT101P	Syllabus version			1.0			
Course Objectives								
<ol style="list-style-type: none"> 1. To impart the knowledge of Laplace transform, an important transform techniques for Engineers which requires knowledge of integration. 2. Presenting the elementary notions of Fourier series, this is vital in practical harmonic analysis. 3. Enriching the skills in solving initial and boundary value problems. 4. Impart the knowledge and application of difference equations and the Z-transform in discrete systems that are inherent in natural and physical processes. 								
Course Outcomes								
At the end of the course the student should be able to:								
<ol style="list-style-type: none"> 1. Find solution for second and higher order differential equations, formation and solving partial differential equations. 2. Understand basic concepts of Laplace Transforms and solve problems with periodic functions, step functions, impulse functions and convolution. 3. Employ the tools of Fourier series and Fourier transforms. 4. Know the techniques of solving differential equations and partial differential equations. 5. Know the Z-transform and its application in population dynamics and digital signal processing. 								
Module:1	Ordinary Differential Equations (ODE)	6 hours						
Second order non- homogenous differential equations with constant coefficients- Differential equations with variable coefficients- method of undetermined coefficients-method of Variation of parameters-Solving Damped forced oscillations and LCR circuit theory problems.								
Module:2	Partial Differential Equations (PDE)	5 hours						
Formation of partial differential equations – Singular integrals — Solutions of standard types of first order partial differential equations – Lagrange's linear equation-Method of separation of variables								
Module:3	Laplace Transform	7 hours						
Definition- Properties of Laplace transform-Laplace transform of standard functions - Laplace transform of periodic functions-Unit step function-Impulse function. Inverse Laplace transform-Partial fractions method and by Convolution theorem..								
Module:4	Solution to ODE and PDE by Laplace transform	7 hours						
Solution of ODE's – Non-homogeneous terms involving Heaviside function, Impulse function - Solving Non-homogeneous system using Laplace transform - solution to First order PDE by Laplace transform.								
Module:5	Fourier Series	6 hours						
Fourier series - Euler's formulae- Dirichlet's conditions - Change of interval - Half range series – RMS value – Parseval's identity.								
Module:6	Fourier Transform	6 hours						
Complex Fourier transform - properties - Relation between Fourier and Laplace Transforms- Fourier sine and cosine transforms – Parseval's identity- Convolution Theorem and simple applications to solve PDE.								
Module:7	Z-Transform	6 hours						
Definition of Z-transform and Inverse Z-transform - Standard functions - Partial fractions and								

convolution method. Difference equation - first and second order difference equations with constant coefficients - solution of simple difference equations using Z-transform.		
Module:8	Contemporary Issues	2 hours
	Total Lecture hours:	45 hours
	Total Tutorial hours :	15 hours
Text Book(s)		
1. Erwin Kreyszig, Advanced Engineering Mathematics, 2015, 10th Edition, John Wiley India. 2. B.S. Grewal, Higher Engineering Mathematics, 2020, 44th Edition, Khanna Publishers.

Approved by Academic Council	No. 64	Date 16-12-2021

BMAT201L	Complex Variables and Linear Algebra	L	T	P	C			
		3	1	0	4			
Pre-requisite	BMAT102L	Syllabus version						
		1.0						
Course Objectives								
<ol style="list-style-type: none"> To present comprehensive, compact, and integrated treatment of one of the most important branches of applied mathematics namely Complex variables to the engineers and the scientists. To present comprehensive, compact, and integrated treatment of another most important branches of applied mathematics namely Linear Algebra to the engineers and the scientists. To provide students with a framework of the concepts that will help them to analyse deeply about many complex problems. 								
Course Outcomes								
At the end of the course the student should be able to								
<ol style="list-style-type: none"> Construct analytic functions and find complex potential of fluid flow and electric fields. Find the image of straight lines by elementary transformations and to express analytic functions in power series. Evaluate real integrals using techniques of contour integration. Use the power of inner product and norm for analysis. Use matrices and transformations for solving engineering problems. 								
Module:1	Analytic Functions	7hours						
Complex variable - Analytic functions and Cauchy – Riemann equations; Laplace equation and Harmonic functions; Construction of Harmonic conjugate and analytic functions; Applications of analytic functions to fluid-flow and electric field problems.								
Module:2	Conformal and Bilinear transformations	7 hours						
Conformal mapping - Elementary transformations; Translation, Magnification, Rotation, Inversion; Exponential and Square transformations ($w = e^z$, z^2); Bilinear transformation; Cross-ratio-Images of the regions bounded by straight lines under the above transformations;								
Module:3	Complex Integration	7 hours						
Functions given by Power Series - Taylor and Laurent series-Singularities - Poles – Residues; Integration of a complex function along a contour; Statements of Cauchy-Goursat theorem- Cauchy's integral formula-Cauchy's residue theorem-Evaluation of real integrals-Indented contour integral.								
Module:4	Vector Spaces	6 hours						
Vector space – subspace; linear combination - span - linearly dependent – Independent – bases; Dimensions; Finite dimensional vector space. Row and column spaces; Rank and nullity.								
Module:5	Linear Transformations	6 hours						
Linear transformations – Basic properties; Invertible linear transformation; Matrices of linear transformations; Vector space of linear transformations; Change of bases; Similarity.								
Module:6	Inner Product Spaces	5 hours						
Dot products and inner products; Lengths and angles of vectors; Matrix representations of inner products; Gram - Schmidt – Orthogonalization.								
Module:7	Matrices and System of Equations	5 hours						
Eigenvalues and Eigen vectors; Properties of Eigenvalues and Eigen vectors; Cayley-Hamilton theorem; System of linear equations; Gaussian elimination and Gauss Jordan methods.								
Module:8	Contemporary issues:	2 hours						

	Total Lecture hours: Total Tutorial hours :	45 hours 15 hours
Text Book(s)

BMAT202L	Probability and Statistics	L	T	P	C			
		3	0	0	3			
Pre-requisite	BMAT101L, BMAT101P	Syllabus version						
		1.0						
Course Objectives :								
<ol style="list-style-type: none"> 1. To provide students with a framework that will help them choose the appropriate descriptive methods in various data analysis situations. 2. To analyze distributions and relationship of real-time data. 3. To apply estimation and testing methods to make inference and modelling techniques for decision making. 								
Course Outcome :								
At the end of the course the student should be able to:								
<ol style="list-style-type: none"> 1. Compute and interpret descriptive statistics using numerical and graphical techniques. 2. Understand the basic concepts of random variables and find an appropriate distribution for analyzing data specific to an experiment. 3. Apply statistical methods like correlation, regression analysis in analyzing, interpreting experimental data. 4. Make appropriate decisions using statistical inference that is the central to experimental research. 5. Use statistical methodology and tools in reliability engineering problems. 								
Module:1	Introduction to Statistics	6 hours						
Statistics and data analysis; Measures of central tendency; Measure of Dispersion, Moments-Skewness-Kurtosis (Concepts only).								
Module:2	Random variables	8 hours						
Random variables- Probability mass function, distribution and density functions-Joint probability distribution and Joint density functions; Marginal, Conditional distribution and Density functions- Mathematical expectation and its properties- Covariance, Moment generating function.								
Module:3	Correlation and Regression	4 hours						
Correlation and Regression – Rank Correlation; Partial and Multiple correlation; Multiple regression.								
Module:4	Probability Distributions	7 hours						
Binomial distribution; Poisson distributions; Normal distribution; Gamma distribution; Exponential distribution; Weibull distribution.								
Module:5	Hypothesis Testing-I	4 hours						
Testing of hypothesis –Types of errors - Critical region, Procedure for testing of hypothesis-Large sample tests- Z test for Single Proportion- Difference of Proportion- Mean and difference of means.								
Module:6	Hypothesis Testing-II	9 hours						
Small sample tests- Student's t-test, F-test- chi-square test- goodness of fit - independence of attributes- Design of Experiments - Analysis of variance – One way-Two way-Three way classifications - CRD-RBD- LSD.								
Module:7	Reliability	5 hours						
Basic concepts- Hazard function-Reliabilities of series and parallel systems- System								

Reliability - Maintainability-Preventive and repair maintenance- Availability.		
Module:8	Contemporary Issues	2 hours
	Total lecture hours:	45 hours

BMAT202P	Probability and Statistics Lab				L	T	P	C								
					0	0	2	1								
Pre-requisite	BMAT101L, BMAT101P				Syllabus version											
					1.0											
Course Objectives:																
<ol style="list-style-type: none"> 1. To enable the students for having experimental knowledge of basic concepts of statistics using R programming. 2. To study the relationship of real-time data and decision making through testing methods using R. 3. To make students capable to do experimental research using statistics in various engineering problems. 																
Course Outcomes:																
At the end of the course the student should be able to:																
<ol style="list-style-type: none"> 1. Demonstrate R programming for statistical data. 2. Carry out appropriate analysis of statistical methods through experimental techniques using R. 																
Indicative Experiments																
1. Introduction: Understanding Data types; importing/exporting data 2. Computing Summary Statistics /plotting and visualizing data using Tabulation and Graphical Representations 3. Applying correlation and simple linear regression model to real dataset; computing and interpreting the coefficient of determination 4. Applying multiple linear regression model to real dataset; computing and interpreting the multiple coefficients of determination 5. Fitting the probability distributions: Binomial distribution 6. Normal distribution, Poisson distribution 7. Testing of hypothesis for one sample mean and proportion from real time problems 8. Testing of hypothesis for two sample means and proportion from real time problems 9. Applying the t-test for independent and dependent samples 10. Applying Chi-square test for goodness of fit test and Contingency test to real dataset 11. Performing ANOVA for real dataset for Completely randomized design, Randomized Block design, Latin square Design					Total Laboratory hours: 30

Course Code	Course Title	L	T	P	C				
BPHY101L	Engineering Physics	3	0	0	3				
Pre-requisite	NIL	Syllabus version		1.0					
Course Objectives									
<p>1. To explain the dual nature of radiation and matter.</p> <p>2. To apply Schrödinger's equation to solve finite and infinite potential problems and apply quantum ideas at the nanoscale.</p> <p>3. To understand the Maxwell's equations for electromagnetic waves and apply the concepts to semiconductors for engineering applications.</p>									
Course Outcome									
At the end of the course the student will be able to									
<p>1. Comprehend the phenomenon of waves and electromagnetic waves.</p> <p>2. Understand the principles of quantum mechanics.</p> <p>3. Apply quantum mechanical ideas to subatomic domain.</p> <p>4. Appreciate the fundamental principles of a laser and its types.</p> <p>5. Design a typical optical fiber communication system using optoelectronic devices.</p>									
Module:1	Introduction to waves	7 hours							
Waves on a string - Wave equation on a string (derivation) - Harmonic waves- reflection and transmission of waves at a boundary (Qualitative) - Standing waves and their eigenfrequencies.									
Module:2	Electromagnetic waves	7 hours							
Physics of divergence - gradient and curl - Qualitative understanding of surface and volume integral - Maxwell Equations (Qualitative) - Displacement current - Electromagnetic wave equation in free space - Plane electromagnetic waves in free space - Hertz's experiment.									
Module:3	Elements of quantum mechanics	6 hours							
Need for Quantum Mechanics: Idea of Quantization (Planck and Einstein) - Compton effect (Qualitative) – de Broglie hypothesis - Davisson-Germer experiment - Wave function and probability interpretation - Heisenberg uncertainty principle - Schrödinger wave equation (time dependent and time independent).									
Module:4	Applications of quantum mechanics	5 hours							
Eigenvalues and eigenfunction of particle confined in one dimensional box - Basics of nanophysics - Quantum confinement and nanostructures - Tunnel effect (qualitative) and scanning tunneling microscope.									
Module:5	Lasers	6 hours							
Laser characteristics - spatial and temporal coherence - Einstein coefficients and their significance - Population inversion - two, three and four level systems - Pumping schemes - threshold gain coefficient - Components of a laser - He-Ne, Nd:YAG and CO ₂ lasers and their engineering applications.									
Module:6	Propagation of EM waves in optical fibers	6 hours							
Introduction to optical fiber communication system - light propagation through fibers - Acceptance angle - Numerical aperture - V-parameter - Types of fibers – Attenuation - Dispersion-intermodal and intramodal. Application of fiber in medicine - Endoscopy.									
Module:7	Optoelectronic devices	6 hours							
Introduction to semiconductors - direct and indirect bandgap – Sources: LED and laser diode, Photodetectors: PN and PIN.									
Module:8	Contemporary issues	2 hours							
		Total Lecture hours:		45 hours

		0	0	2	1			
Pre-requisite	12th or equivalent	Syllabus version						
		1.0						
Course Objectives								
To apply theoretical knowledge gained in the theory course and get hands-on experience of the topics.								
Course Outcome								
At the end of the course the student will be able to								
<ol style="list-style-type: none"> 1. Comprehend the dual nature of radiation and matter by means of experiments. 2. Get hands-on experience on the topics of quantum mechanical ideas in the laboratory. 3. Apply low power lasers in optics and optical fiber related experiments. 								
Indicative Experiments								
1. To determine the dependence of fundamental frequency with the length and tension of a stretched string using sonometer.								
2. To determine the characteristics of EM waves using Hertz experiment								
3. To determine the wavelength of laser source (He-Ne laser and diode lasers of different wavelengths) using diffraction grating								
4. To demonstrate the wave nature of electron by diffraction through graphite sheet								
5. To determine the Planck's constant using electroluminescence process								
6. To numerically demonstrate the discrete energy levels and the wavefunctions using Schrödinger equation (e.g., particle in a box problem can be given as an assignment)								
7. To determine the refractive index of a prism using spectrometer (angle of prism will be given)								
8. To determine the efficiency of a solar cell								
9. To determine the acceptance angle and numerical aperture of an optical fiber								
10. To demonstrate the phase velocity and group velocity (simulation)

Pre-requisite	Nil	Syllabus version							
		1.0							
Course Objectives:									
<ol style="list-style-type: none"> 1. To enhance the logical reasoning skills of the students and help them improve problem-solving abilities 2. To acquire skills required to solve quantitative aptitude problems 3. To boost the verbal ability of the students for academic and professional purposes 									
Course Outcomes:									
<ol style="list-style-type: none"> 1. Exhibit sound knowledge to solve problems of Quantitative Aptitude 2. Demonstrate ability to solve problems of Logical Reasoning 3. Display the ability to tackle questions of Verbal Ability 									
Module:1	Logical Reasoning	5 hours							
Word group categorization questions									
Puzzle type class involving students grouping words into right group orders of logical sense									
Cryptarithmetic									
Module:2	Data arrangements and Blood relations	6 hours							
Linear Arrangement - Circular Arrangement - Multi-dimensional Arrangement - Blood Relations									
Module:3	Ratio and Proportion	6 hours							
Ratio - Proportion - Variation - Simple equations - Problems on Ages - Mixtures and alligations									
Module:4	Percentages, Simple and Compound Interest	6 hours							
Percentages as Fractions and Decimals - Percentage Increase / Decrease - Simple Interest - Compound Interest - Relation Between Simple and Compound Interest									
Module:5	Number System	6 hours							
Number system- Power cycle - Remainder cycle - Factors, Multiples - HCF and LCM									
Module:6	Essential grammar for Placement	7 hours							
<ul style="list-style-type: none"> • Prepositions • Adjectives and Adverbs • Tense • Speech and Voice • Idioms and Phrasal Verbs • Collocations, Gerunds and Infinitives • Definite and Indefinite Articles • Omission of Articles • Prepositions • Compound Prepositions and Prepositional Phrases • Interrogatives 									
Module:7	Reading Comprehension for Placement	3 hours							
Types of questions - Comprehension strategies - Practice exercises									
Module:8	Vocabulary for Placement	6 hours							
Exposure to questions related to Synonyms – Antonyms – Analogy - Confusing words - Spelling correctness									
		Total Lecture hours:			45 hours

		1.0							
Course Objectives:									
<ol style="list-style-type: none"> 1. Help to trigger the students' logical thinking skills and apply it in real-life scenarios 2. Learn to deploy the strategies of solving quantitative ability problems 3. To expand the verbal ability of students 4. Assist to run the gamut of employability skills 									
Course Outcomes:									
<ol style="list-style-type: none"> 1. Become proficient in interacting and using decision making models effectively 2. Help to understand the given concepts expressly to deliver an impactful presentation 3. Acquire knowledge of solving quantitative aptitude and verbal ability questions effortlessly 									
Module:1	Logical Reasoning puzzles - Advanced	2 hours							
Advanced puzzles: <ul style="list-style-type: none"> • Sudoku • Mind-bender style word statement puzzles • Anagrams • Rebus puzzles 									
Module:2	Logical connectives, Syllogism and Venn diagrams	2 hours							
Logical Connectives - Advanced Syllogisms - 4, 5, 6 and other multiple statement problems - Challenging Venn Diagram questions: Set theory									
Module:3	Permutation, Combination and Probability - Advanced	4 hours							
Fundamental Counting Principle- Permutation and Combination - Computation of Permutation - Advanced problems - Circular Permutations - Computation of Combination - Advanced problems -Advanced probability									
Module:4	Quantitative Aptitude	6 hours							
Logarithms, Progressions, Geometry and Quadratic equations - Advanced <ul style="list-style-type: none"> • Logarithm • Arithmetic Progression • Geometric Progression • Geometry • Mensuration • Coded inequalities • Quadratic Equations 									
Concepts followed by advanced questions of CAT level									
Module:5	Image interpretation	2 hours							
Image interpretation: Methods - Exposure to image interpretation questions through brainstorming and practice									
Module:6	Critical Reasoning - Advanced	3 hours							
Concepts of Critical Reasoning - Exposure to advanced questions of GMAT level									
Module:7	Recruitment Essentials	8 hours							
Mock interviews									
Cracking other kinds of interviews									

Skype/ Telephonic interviews Panel interviews Stress interviews	
Guesstimation	
1. Best methods to approach Guesstimation questions 2. Practice with impromptu interview on Guesstimation questions	
Case studies/ situational interview	
1. Scientific strategies to answer case study and situational interview questions 2. Best ways to present cases 3. Practice on presenting cases and answering situational interviews asked in recruitment rounds	
Module:8 Problem solving and Algorithmic skills	18 hours
Logical methods to solve problem statements in Programming - Basic algorithms introduced

Course Objectives									
<ol style="list-style-type: none"> Provide an understanding of Boolean algebra and logic functions. Develop the knowledge of combinational and sequential logic circuit design. Design and model the data path circuits for digital systems. Establish a strong understanding of programmable logic. Enable the student to design and model the logic circuits using Verilog HDL. 									
Course Outcome									
At the end of the course the student will be able to									
<ol style="list-style-type: none"> Optimize the logic functions using and Boolean principles and K-map. Model the Combinational and Sequential logic circuits using Verilog HDL. Design the various combinational logic circuits and data path circuits. Analyze and apply the design aspects of sequential logic circuits. Analyze and apply the design aspects of Finite state machines. Examine the basic architectures of programmable logic devices. 									
Module:1	Digital Logic								
8 hours									
Boolean Algebra: Basic definitions, Axiomatic definition of Boolean Algebra, Basic Theorems and Properties of Boolean Algebra, Boolean Functions, Canonical and Standard Forms, Simplification of Boolean functions. Gate-Level Minimization: The Map Method (K-map up to 4 variable), Product of Sums and Sum of Products Simplification, NAND and NOR Implementation. Logic Families: Digital Logic Gates, TTL and CMOS logic families.									
Module:2	Verilog HDL								
5 hours									
Lexical Conventions, Ports and Modules, Operators, Dataflow Modelling, Gate Level Modelling, Behavioural Modeling, Test Bench.									
Module:3	Design of Combinational Logic Circuits								
8 hours									
Design Procedure, Half Adder, Full Adder, Half Subtractor, Full Subtractor, Decoders, Encoders, Multiplexers, De-multiplexers, Parity generator and checker, Applications of Decoder, Multiplexer and De-multiplexer. Modeling of Combinational logic circuits using Verilog HDL.									
Module:4	Design of data path circuits								
6 hours									
N-bit Parallel Adder/Subtractor, Carry Look Ahead Adder, Unsigned Array Multiplier, Booth Multiplier, 4-Bit Magnitude comparator. Modeling of data path circuits using Verilog HDL.									
Module:5	Design of Sequential Logic Circuits								
8 hours									
Latches, Flip-Flops - SR, D, JK & T, Buffer Registers, Shift Registers - SISO, SIPO, PISO, PIPO, Design of synchronous sequential circuits: state table and state diagrams, Design of counters: Modulo-n, Johnson, Ring, Up/Down, Asynchronous counter. Modeling of sequential logic circuits using Verilog HDL.									
Module:6	Design of FSM								
4 hours									
Finite state Machine(FSM):Mealy FSM and Moore FSM , Design Example : Sequence detection, Modeling of FSM using Verilog HDL.									
Module:7	Programmable Logic Devices								
4 hours									
Types of Programmable Logic Devices: PLA, PAL, CPLD, FPGA Generic Architecture.									

Module:8	Contemporary issues	2 hours
Total Lecture hours:		45 hours
Textbook(s)

Course Objective									
<ul style="list-style-type: none"> To apply theoretical knowledge gained in the theory course and get hands-on experience of the topics. 									
Course Outcome									
At the end of the course the student will be able to									
<ol style="list-style-type: none"> Design, simulate and synthesize combinational logic circuits, data path circuits and sequential logic circuits using Verilog HDL. Design and implement FSM on FPGA. Design and implement small digital systems on FPGA. 									
Indicative Experiments									
1.	Characteristics of Digital ICs, Realization of Boolean expressions	2 hours							
2.	Design and Verilog modeling of Combinational Logic circuits	4 hours							
3.	Design and Verilog modeling of various data path elements - Adders	2 hours							
4.	Design and Verilog modeling of various data path elements - Multipliers	2 hours							
5.	Implementation of combinational circuits – (FPGA / Trainer Kit)	2 hours							
6.	Implementation of data path circuit - (FPGA / Trainer Kit)	2 hours							
7.	Design and Verilog modeling of simple sequential circuits like Counters and Shift registers	2 hours							
8.	Design and Verilog modeling of complex sequential circuits	2 hours							
9.	Implementation of Sequential circuits - (FPGA / Trainer Kit)	2 hours							
10.	Design and Verilog modeling of FSM based design – Serial Adder	2 hours							
11.	Design and Verilog modeling of FSM based design – Traffic Light Controller / Vending Machine	4 hours							
12.	Design of ALU	4 hours

Mode of Assessment: Continuous Assessment and Final Assessment Test									
Recommended by Board of Studies	14-05-2022								
Approved by Academic Council	No. 66	Date	16-06-2022						

Course Code	Course Title	L	T	P	C
BECE204L	Microprocessors and Microcontrollers	3	0	0	3
Pre-requisite	BECE102L	Syllabus version			1.0
Course Objectives:					

1. To acquaint students with architectures of Intel microprocessors, microcontroller and ARM processors.
2. To familiarize the students with assembly language programming in 8051 microcontroller and ARM processor.
3. To interface peripherals and I/O devices with the 8051 microcontroller.

Course Outcome:

At the end of the course, the student should be able to

1. Comprehend the various microprocessors including Intel Pentium Processors
2. Infer the architecture and Programming of Intel 8086 Microprocessor.
3. Comprehend the architectures and programming of 8051 microcontroller.
4. Deploy the implementation of various peripherals such as general purpose input/output, timers, serial communication, LCD, keypad and ADC with 8051 microcontroller
5. Infer the architecture of ARM Processor
6. Develop the simple application using ARM processor.

Module:1 Overview of Microprocessors	3 hours
---	----------------

Introduction to Microprocessors, 8-bit/16-bit Microprocessor, Overview of Intel Pentium, I (i3, i5, i7) Series Processor.

Module:2 Microprocessor Architecture and Interfacing: Intel x86	8 hours
--	----------------

16-bit Microprocessor: 8086 - Architecture and Addressing modes, Memory Segmentation, Instruction Set, Assembly Language Processing, Programming with DOS and BIOS function calls, minimum and maximum mode configuration, Programmable Peripheral Interface (8255), Programmable Timer Controller (8254), Memory Interface to 8086.

Module:3 Microcontroller Architecture: Intel 8051	7 hours
--	----------------

Microcontroller 8051 - Organization and Architecture, RAM-ROM Organization, Machine Cycle, Instruction set: Addressing modes, Data Processing - Stack, Arithmetic, Logical; Branching – Unconditional and Conditional, Assembly programming.

Module:4 Microcontroller 8051 Peripherals	5 hours
--	----------------

I/O Ports, Timers-Counters, Serial Communication and Interrupts.

Module:5 I/O interfacing with Microcontroller 8051	7 hours
---	----------------

LCD, LED, Keypad, Analog-to-Digital Convertors, Digital-to-Analog Convertors, Sensor with Signal Conditioning Interface.

Module:6 ARM Processor Architecture	5 hours
--	----------------

ARM Design Philosophy; Overview of ARM architecture; States [ARM, Thumb, Jazelle]; Registers, Modes; Conditional Execution; Pipelining; Vector Tables; Exception handling.

Module:7 ARM Instruction Set	8 hours
-------------------------------------	----------------

ARM Instruction- data processing instructions, branch instructions, load store instructions, SWI Instruction, Loading instructions, conditional Execution, Assembly Programming.

Module:8 Contemporary issues	2 hours
-------------------------------------	----------------

	Total Lecture hours:	45 hours

Course Code	Course Title	L	T	P	C
BECE204P	Microprocessors and Microcontrollers Lab	0	0	2	1
Pre-requisite	BECE102L		Syllabus version		
			1.0		

Course Objectives

1. To familiarize the students with assembly language programming using microprocessor and microcontroller.
2. To familiarize the students with Embedded C language programming using microcontroller.
3. To interface peripherals and I/O devices with the microcontroller and microprocessor.

Course Outcome

Student will be able to

1. Showcase the skill, knowledge and ability of programming microcontroller and microprocessor using its instruction set.
2. Expertise with microcontroller and interfaces including general purpose input/ output, timers, serial communication, LCD, keypad and ADC.

Indicative Experiments [Experiments using 8086/8051/ARM]

1	Assembly language programming of Arithmetic/logical operations.	6 hours
2	Assembly language programming of memory operations.	4 hours
3	Assembly language programming/ Embedded C programming for interfacing the peripherals: General purpose input/ output, timers, serial communication, LCD, keypad and ADC.	10 hours
4	Hardware implementation of peripheral interfacing: General purpose input/ output, timers, serial communication, LCD, keypad and ADC.	10 hours

BMAT205L	Discrete Mathematics and Graph Theory	L	T	P	C						
		3	1	0	4						
Pre-requisite	NIL	Syllabus Version		1.0							
Course Objectives:											
<ol style="list-style-type: none"> 1. To address the challenges of the relevance of lattice theory and algebraic structures to computer science and engineering problems. 2. To use Counting techniques, in particular recurrence relations to computer science problems. 3. To understand the concepts of graph theory and related algorithm concepts. 											
Course Outcomes:											
At the end of this course, students are expected to											
<ol style="list-style-type: none"> 1. Learn proof techniques and concepts of inference theory 2. Use algebraic structures in applications 3. Counting techniques in engineering problems. 4. Use lattice and Boolean algebra properties in Digital circuits. 5. Solve Science and Engineering problems using Graph theory. 											
Module:1	Mathematical Logic	7 hours									
Statements and Notation-Connectives-Tautologies-Equivalence - Implications-Normal forms - The Theory of Inference for the Statement Calculus - Predicate Calculus - Inference Theory of the Predicate Calculus											
Module:2	Algebraic Structures	6 hours									
Semigroups and Monoids - Groups – Subgroups – Lagrange's Theorem Homomorphism – Properties-Group Codes.											
Module:3	Counting Techniques	6 hours									
Basics of counting - Pigeonhole principle - Permutations and combinations - Inclusion-exclusion principle - Recurrence relations - Solving recurrence relations - Generating functions-Solution to recurrence relations.											
Module:4	Lattices and Boolean algebra	6 hours									
Partially Ordered Relations -Lattices as Posets – Hasse Diagram – Properties of Lattices – Boolean algebra-Properties of Boolean Algebra-Boolean functions.											
Module:5	Fundamentals of Graphs	6 hours									
Basic Concepts of Graph Theory – Planar and Complete graph - Matrix representation of Graphs – Graph Isomorphism – Connectivity-Cut sets-Euler and Hamilton Paths–Shortest Path algorithms											
Module:6	Trees, Fundamental circuits, Cut sets	6 hours									
Trees – properties of trees – distance and centres in tree – Spanning trees – Spanning tree algorithms- Tree traversals- Fundamental circuits and cut-sets											
Module:7	Graph colouring, covering, Partitioning	6 hours									
Bipartite graphs - Chromatic number – Chromatic partitioning – Chromatic polynomial - matching – Covering– Four Colour problem.											
Module:8	Contemporary Issues	2 hours

BCSE202L	Data Structures and Algorithms	L	T	P	C			
		3	0	0	3			
Pre-requisite	NIL	Syllabus version						
		1.0						
Course Objectives								
1. To impart basic concepts of data structures and algorithms. 2. To differentiate linear, non-linear data structures and their operations. 3. To comprehend the necessity of time complexity in algorithms.								
Course Outcomes								
On completion of this course, students should be able to: 1. Understand the fundamental analysis and time complexity for a given problem. 2. Articulate linear, non-linear data structures and legal operations permitted on them. 3. Identify and apply suitable algorithms for searching and sorting. 4. Discover various tree and graph traversals. 5. Explicate hashing, heaps and AVL trees and realize their applications.								
Module:1	Algorithm Analysis	8 hours						
Importance of algorithms and data structures - Fundamentals of algorithm analysis: Space and time complexity of an algorithm, Types of asymptotic notations and orders of growth - Algorithm efficiency – best case, worst case, average case - Analysis of non-recursive and recursive algorithms - Asymptotic analysis for recurrence relation: Iteration Method, Substitution Method, Master Method and Recursive Tree Method.								
Module:2	Linear Data Structures	7 hours						
Arrays: 1D and 2D array- Stack - Applications of stack: Expression Evaluation, Conversion of Infix to postfix and prefix expression, Tower of Hanoi – Queue - Types of Queue: Circular Queue, Double Ended Queue (deQueue) - Applications – List: Singly linked lists, Doubly linked lists, Circular linked lists- Applications: Polynomial Manipulation.								
Module:3	Searching and Sorting	7 hours						
Searching: Linear Search and binary search – Applications. Sorting: Insertion sort, Selection sort, Bubble sort, Counting sort, Quick sort, Merge sort - Analysis of sorting algorithms.								
Module:4	Trees	6 hours						
Introduction - Binary Tree: Definition and Properties - Tree Traversals- Expression Trees:- Binary Search Trees - Operations in BST: insertion, deletion, finding min and max, finding the k th minimum element.								
Module:5	Graphs	6 hours						
Terminology – Representation of Graph – Graph Traversal: Breadth First Search (BFS), Depth First Search (DFS) - Minimum Spanning Tree: Prim's, Kruskal's - Single Source Shortest Path: Dijkstra's Algorithm.								
Module:6	Hashing	4 hours						
Hash functions - Separate chaining - Open hashing: Linear probing, Quadratic probing, Double hashing - Closed hashing - Random probing – Rehashing - Extendible hashing.								
Module:7	Heaps and AVL Trees	5 hours						
Heaps - Heap sort- Applications -Priority Queue using Heaps. AVL trees: Terminology, basic operations (rotation, insertion and deletion).								
Module:8	Contemporary Issues	2 hours						
		Total Lecture hours:			45 hours

Course Objectives								
<ol style="list-style-type: none"> 1. To convey the Internet and Its Application in Real world. 2. To introduce the fundamentals of web programming through HTML and CSS. 3. To establish the application of Javascript in designing interactive web pages. 4. To investigate various elements of ReactJS and design user interfaces to deploy in the real time. 								
Course Outcomes								
At the end of this course students will be able to:								
<ol style="list-style-type: none"> 1. Apply various elements of HTML and CSS. 2. Design interactive web pages using JavaScript. 3. Create Dynamic Web Applications using ReactJS. 4. Deploy and host web applications in Local Servers or Cloud platforms. 								
Module:1	Introduction	2 hours						
World wide web and its evolution - E-mail, Telnet, FTP, E-commerce, Cloud Computing, Video conferencing - Internet service providers, IP Address, URL, Domain Name Servers - Web Browsers, Search Engine -Web Server vs Application Server.								
Module:2	Hypertext Markup Language	2 hours						
HTML Tags, Structure, HTML Coding Conventions - Block Elements, Text Elements, Code-Related Elements, Character References - Lists, Images, section, article, and aside Elements - nav and a Elements - header and footer Elements.								
Module:3	Cascading Style Sheets	2 hours						
CSS Overview - CSS Rules, CSS Syntax and Style - Class Selectors, ID Selectors, span and div Elements - Cascading, style Attribute, style Container, External CSS Files - CSS Properties: Color Properties, Font Properties, line-height Property, Text Properties, Border Properties. Element Box, padding Property, margin Property - Hosting a Website and GIT.								
Module:4	JavaScript	3 hours						
Hello World Web Page - Buttons, Functions, Variables, Identifiers - Assignment Statements and Objects - Document Object Model, Forms: form Element, Controls, Text Control Accessing a Form's Control Values, reset and focus Methods – Event Handler Attributes: onchange, onmouseover, onmouseout.								
Module:5	Advanced JavaScript	2 hours						
While Loop, External JavaScript Files, do Loop, Radio Buttons, Checkboxes, for Loop - fieldset and legend Elements- Manipulating CSS with JavaScript- Using z-index to Stack Elements-Textarea Controls - Pull-Down Menus- List Boxes- Canvas and Drawing - Event Handler and Listener.								
Module:6	ReactJS	2 hours						
React Environment Setup - ReactJS Basics - React JSX - React Components: React Component API - React Component Life Cycle - React Constructors - React Dev Tools - React Native vs ReactJS.								
Module:7	Advanced ReactJS	2 hours						
React Dataflow: React State - React Props - React Props Validation - Styling React - Hooks and Routing - Deploying React - Case Studies for building dynamic web applications.								
		Total Lecture hours:			15 hours

Course Objectives								
<p>1. To provide mathematical foundations for analyzing the complexity of the algorithms 2. To impart the knowledge on various design strategies that can help in solving the real world problems effectively 3. To synthesize efficient algorithms in various engineering design situations</p>								
Course Outcomes								
On completion of this course, student should be able to:								
<p>1. Apply the mathematical tools to analyze and derive the running time of the algorithms 2. Demonstrate the major algorithm design paradigms. 3. Explain major graph algorithms, string matching and geometric algorithms along with their analysis. 4. Articulating Randomized Algorithms. 5. Explain the hardness of real-world problems with respect to algorithmic efficiency and learning to cope with it.</p>								
Module:1	Design Paradigms: Greedy, Divide and Conquer Techniques	6 hours						
Overview and Importance of Algorithms - Stages of algorithm development: Describing the problem, Identifying a suitable technique, Design of an algorithm, Derive Time Complexity, Proof of Correctness of the algorithm, Illustration of Design Stages - Greedy techniques: Fractional Knapsack Problem, and Huffman coding - Divide and Conquer: Maximum Subarray, Karatsuba faster integer multiplication algorithm.								
Module:2	Design Paradigms: Dynamic Programming, Backtracking and Branch & Bound Techniques	10 hours						
Dynamic programming: Assembly Line Scheduling, Matrix Chain Multiplication, Longest Common Subsequence, 0-1 Knapsack, TSP- Backtracking: N-Queens problem, Subset Sum, Graph Coloring- Branch & Bound: LIFO-BB and FIFO BB methods: Job Selection problem, 0-1 Knapsack Problem								
Module:3	String Matching Algorithms	5 hours						
Naïve String-matching Algorithms, KMP algorithm, Rabin-Karp Algorithm, Suffix Trees.								
Module:4	Graph Algorithms	6 hours						
All pair shortest path: Bellman Ford Algorithm, Floyd-Warshall Algorithm - Network Flows: Flow Networks, Maximum Flows: Ford-Fulkerson, Edmond-Karp, Push Re-label Algorithm – Application of Max Flow to maximum matching problem								
Module:5	Geometric Algorithms	4 hours						
Line Segments: Properties, Intersection, sweeping lines - Convex Hull finding algorithms: Graham's Scan, Jarvis' March Algorithm.								
Module:6	Randomized algorithms	5 hours						
Randomized quick sort - The hiring problem - Finding the global Minimum Cut.								
Module:7	Classes of Complexity and Approximation Algorithms	7 hours						
The Class P - The Class NP - Reducibility and NP-completeness – SAT (Problem Definition and statement), 3SAT, Independent Set, Clique, Approximation Algorithm – Vertex Cover, Set Cover and Travelling salesman								
Module:8	Contemporary Issues	2 hours

Course Objectives							
<p>1. To acquaint students with the basic concepts of fundamental component, architecture, register organization and performance metrics of a computer and to impart the knowledge of data representation in binary and to understand the implementation of arithmetic algorithms in a typical computer.</p> <p>2. To teach students how to describe machine capabilities and design an effective data path design for instruction execution. To introduce students to syntax and semantics of machine level programming.</p> <p>3. To make students understand the importance of memory systems, IO interfacing techniques and external storage and their performance metrics for a typical computer. And explore various alternate techniques for improving the performance of a processor.</p>							
Course Outcomes							
On completion of this course, student should be able to:							
<p>1. Differentiate Von Neumann, Harvard, and CISC and RISC architectures. Analyze the performance of machine with different capabilities. Recognize different instruction formats and addressing modes. Validate efficient algorithm for fixed point and floating point arithmetic operations.</p> <p>2. Explain the importance of hierarchical memory organization. Able to construct larger memories. Analyze and suggest efficient cache mapping technique and replacement algorithms for given design requirements. Demonstrate hamming code for error detection and correction.</p> <p>3. Understand the need for an interface. Compare and contrast memory mapping and IO mapping techniques. Describe and Differentiate different modes of data transfer. Appraise the synchronous and asynchronous bus for performance and arbitration.</p> <p>4. Assess the performance of IO and external storage systems. Classify parallel machine models. Analyze the pipeline hazards and solutions.</p>							
Module:1	Introduction To Computer Architecture and Organization	5 Hours					
Overview of Organization and Architecture –Functional components of a computer: Registers and register files - Interconnection of components - Overview of IAS computer function - Organization of the von Neumann machine - Harvard architecture - CISC & RISC Architectures.							
Module:2	Data Representation and Computer Arithmetic	5 Hours					
Algorithms for fixed point arithmetic operations: Multiplication (Booths, Modified Booths), Division (restoring and non-restoring) - Algorithms for floating point arithmetic operations - Representation of nonnumeric data (character codes).							
Module:3	Instruction Sets and Control Unit	9 Hours					
Computer Instructions: Instruction sets, Instruction Set Architecture, Instruction formats, Instruction set categories - Addressing modes - Phases of instruction cycle – ALU - Data-path and control unit: Hardwired control unit and Micro programmed control unit - Performance metrics: Execution time calculation, MIPS, MFLOPS.							
Module:4	Memory System Organization and Architecture	7 Hours					
Memory systems hierarchy: Characteristics, Byte Storage methods, Conceptual view of memory cell - Design of scalable memory using RAM's- ROM's chips - Construction of larger size memories - Memory Interleaving - Memory interface address map- Cache memory: principles, Cache memory management techniques, Types of caches, caches misses, Mean							

memory access time evaluation of cache.		
Module:5	Interfacing and Communication	5 Hours
I/O fundamentals: handshaking, buffering, I/O Modules - I/O techniques: Programmed I/O, Interrupt-driven I/O, Direct Memory Access, Direct Cache Access - Interrupt structures: Vectored and Prioritized-interrupt overhead - Buses: Synchronous and asynchronous - Arbitration.		
Module:6	Subsystems	5 Hours
External storage systems: Solid state drivers - Organization and Structure of disk drives: Electronic- magnetic and optical technologies - Reliability of memory systems - Error detecting and error correcting systems - RAID Levels - I/O Performance		
Module:7	High Performance Processors	7 Hours
Classification of models - Flynn's taxonomy of parallel machine models (SISD, SIMD, MISD, MIMD) - Pipelining: Two stages, Multi stage pipelining, Basic performance issues in pipelining, Hazards, Methods to prevent and resolve hazards and their drawbacks - Approaches to deal branches - Superscalar architecture: Limitations of scalar pipelines, superscalar versus super pipeline architecture, superscalar techniques, performance evaluation of superscalar architecture - performance evaluation of parallel processors: Amdahl's law, speed-up and efficiency.		
Module:8	Contemporary Issues	2 Hours
		Total Lecture Hours 45 Hours
Text Book(s)		
1	David A. Patterson and John L. Hennessy, Computer Organization and Design -The Hardware / Software Interface 6 th Edition, Morgan Kaufmann, 2020

Approved by Academic Council	No. 65	Date 17-03-2022

BCSE301L	Software Engineering	L	T	P	C				
		3	0	0	3				
Pre-requisite	NIL	Syllabus version		1.0					
Course Objectives									
<p>1. To introduce the essential Software Engineering concepts.</p> <p>2. To impart concepts and skills for performing analysis, design, develop, test and evolve efficient software systems of various disciplines and applications</p> <p>3. To make familiar about engineering practices, standards and metrics for developing software components and products.</p>									
Course Outcomes									
On completion of this course, student should be able to:									
<ol style="list-style-type: none"> 1. Apply and assess the principles of various process models for the software development. 2. Demonstrate various software project management activities that include planning, Estimations, Risk assessment and Configuration Management 3. Perform Requirements modelling and apply appropriate design and testing heuristics to produce quality software systems. 4. Demonstrate the complete Software life cycle activities from requirements analysis to maintenance using the modern tools and techniques. 5. Escalate the use of various standards and metrics in evaluating the process and product. 									
Module:1	Overview Of Software Engineering								
6 hours									
Nature of Software, Software Engineering, Software process, project, product, Process Models									
Classical Evolutionary models, Introduction to Agility - Agile Process-Extreme programming - XP Process – Principles of Agile Software Development framework - Overview of System Engineering									
Module:2	Introduction To Software Project Management								
6 hours									
Planning, Scope, Work break-down structure, Milestones, Deliverables, Cost and Estimates - (Human Resources, Time-scale, Costs), Risk Management, RMMM Plan, CASE TOOLS, Agile Project Management, Managing team dynamics and communication, Metrics and Measurement									
Module:3	Modelling Requirements								
8 hours									
Software requirements and its types, Requirements Engineering process, Requirement Elicitation, System Modeling – Requirements Specification and Requirement Validation, Requirements Elicitation techniques, Requirements management in Agile.									
Module:4	Software Design								
8 hours									
Design concepts and principles - Abstraction - Refinement - Modularity Cohesion coupling, Architectural design, Detailed Design Transaction Transformation, Refactoring of designs, Object oriented Design User-Interface Design									
Module:5	Validation And Verification								
7 hours									
Strategic Approach to Software Testing, Testing Fundamentals Test Plan, Test Design, Test Execution, Reviews, Inspection and Auditing – Regression Testing – Mutation Testing - Object oriented testing - Testing Web based System - Mobile App testing – Mobile test Automation and tools – DevOps Testing – Cloud and Big Data Testing									
Module:6	Software Evolution								
4 hours									

Software Maintenance, Types of Maintenance, - Software Configuration Management – Overview – SCM Tools. Re-Engineering, Reverse Engineering, Software Reuse		
Module:7	Quality Assurance	4 hours
Product and Process Metrics, Quality Standards Models ISO, TQM, Six-Sigma, Process improvement Models: CMM & CMMI. Quality Control and Quality Assurance - Quality Management - Quality Factors - Methods of Quality Management		
Module:8	Contemporary Issues	2 hours
		Total Lecture hours: 45 hours

				1.0						
Course Objectives										
<ol style="list-style-type: none"> 1. To understand the concepts of File system and structure of the database; Designing an Entity-Relationship model for a real-life application and Mapping a database schema from the ER model. 2. To differentiate various normal forms, evaluate relational schemas for design qualities and optimize a query. 3. To impart the working methodologies of transaction management, understand concurrency control, recovery, indexing, access methods and fundamental view on unstructured data and its management. 										
Course Outcomes										
On completion of this course, student should be able to:										
<ol style="list-style-type: none"> 1. Comprehend the role of database management system in an organization and design the structure and operation of the relational data model. 2. Develop a database project depending on the business requirements, considering various design issues. 3. List the concepts of indexing and accessing methods. 4. Explain the concept of a database transaction processing and comprehend the concept of database facilities including concurrency control, backup and recovery. 5. Review the fundamental view on unstructured data and describe other emerging database technologies. 										
Module:1	Database Systems Concepts and Architecture	4 hours								
Need for database systems – Characteristics of Database Approach – Advantages of using DBMS approach - Actors on the Database Management Scene: Database Administrator - Classification of database management systems - Data Models - Schemas and Instances - Three-Schema Architecture - The Database System Environment - Centralized and Client/Server Architectures for DBMSs – Overall Architecture of Database Management Systems										
Module:2	Relational Model and E-R Modeling	6 hours								
Relational Model: Candidate Keys, Primary Keys, Foreign Keys - Integrity Constraints - Handling of Nulls - Entity Relationship Model: Types of Attributes, Relationships, Structural Constraints, Relational model Constraints – Mapping ER model to a relational schema – Extended ER Model - Generalization – Specialization – Aggregations.										
Module:3	Relational Database Design	6 hours								
Database Design – Schema Refinement - Guidelines for Relational Schema - Functional dependencies - Axioms on Functional Dependencies- Normalization: First, Second and Third Normal Forms - Boyce Codd Normal Form, Multi-valued dependency and Fourth Normal form - Join dependency and Fifth Normal form										
Module:4	Physical Database Design and Query Processing	8 hours								
File Organization - Indexing: Single level indexing, multi-level indexing, dynamic multilevel Indexing - B+ Tree Indexing – Hashing Techniques: Static and Dynamic Hashing – Relational Algebra - Translating SQL Queries into Relational Algebra - Query Processing – Query Optimization: Algebraic Query Optimization, Heuristic query optimization Rules, Join Query Optimization using Indexing and Hashing - Tuple Relational Calculus.										
Module:5	Transaction Processing and Recovery	8 hours								

Introduction to Transaction Processing – Transaction concepts: ACID Properties of Transactions, Transaction States - Serial and Serializable Schedules - Schedules based on recoverability – Schedules based on Serializability - Conflict Serializability - Recovery Concepts: Log Based Recovery Protocols, Recovery based on deferred update, Recovery techniques based on immediate update – Shadow Paging Algorithm		
Module:6	Concurrency Control In Transaction Processing	8 hours
Concurrent Transactions – Lost Update Problem - Concurrency Control Techniques: Time Stamp Based Protocols, Thomas Write Rule, Lock Based Protocols, Lock Compatibility Matrix, - Two-Phase Locking Protocol - Lock Conversions - Graph Based Protocols for Concurrency Control - Tree Protocol for Concurrency Control – Deadlocks Based on Locks in Transactions – Deadlock Handling Techniques – Transaction Deadlock Detection Techniques – Transaction Deadlock Prevention Techniques – Multi-Granularity Locking for avoiding Transaction Deadlocks		
Module:7	NOSQL Database Management	3 hours
Introduction, Need of NoSQL, CAP Theorem, different NoSQL data bases: Key-value data stores, Columnar families, Document databases, Graph databases		
Module:8	Contemporary Issues	2 Hours
Total Lecture hours:		45 hours
Text Book

BCSE303L	Operating Systems	L	T	P	C		
		3	0	0	3		
Pre-requisite	NIL	Syllabus version		1.0			
Course Objectives							
<p>1. To introduce the operating system concepts, designs and provide skills required to implement the services.</p> <p>2. To describe the trade-offs between conflicting objectives in large scale system design.</p> <p>3. To develop the knowledge for application of the various design issues and services.</p>							
Course Outcomes							
On completion of this course, student should be able to:							
<p>1. Interpret the evolution of OS functionality, structures, layers and apply various types of system calls of various process states.</p> <p>2. Design scheduling algorithms to compute and compare various scheduling criteria.</p> <p>3. Apply and analyze communication between inter process and synchronization techniques.</p> <p>4. Implement page replacement algorithms, memory management problems and segmentation.</p> <p>5. Differentiate the file systems for applying different allocation, access technique, representing virtualization and providing protection and security to OS.</p>							
Module:1	Introduction	3 hours					
Introduction to OS: Functionality of OS - OS design issues - Structuring methods (monolithic, layered, modular, micro-kernel models) - Abstractions, processes, resources - Influence of security, networking, and multimedia.							
Module:2	OS Principles	4 hours					
System calls, System/Application Call Interface – Protection: User/Kernel modes - Interrupts - Processes - Structures (Process Control Block, Ready List etc.), Process creation, management in Unix – Threads: User level, kernel level threads and thread models.							
Module:3	Scheduling	9 hours					
Processes Scheduling - CPU Scheduling: Pre-emptive, non-pre-emptive - Multiprocessor scheduling – Deadlocks - Resource allocation and management - Deadlock handling mechanisms: prevention, avoidance, detection, recovery.							
Module:4	Concurrency	8 hours					
Inter-process communication, Synchronization - Implementing synchronization primitives (Peterson's solution, Bakery algorithm, synchronization hardware) - Semaphores – Classical synchronization problems, Monitors: Solution to Dining Philosophers problem – IPC in Unix, Multiprocessors and Locking - Scalable Locks - Lock-free coordination.							
Module:5	Memory Management	7 hours					
Main memory management, Memory allocation strategies, Virtual memory: Hardware support for virtual memory (caching, TLB) – Paging - Segmentation - Demand Paging - Page Faults - Page Replacement -Thrashing - Working Set.							
Module:6	Virtualization and File System Management	6 hours					
Virtual Machines - Virtualization (Hardware/Software, Server, Service, Network - Hypervisors - Container virtualization - Cost of virtualization - File system interface (access methods, directory structures) - File system implementation (directory implementation, file allocation methods) - File system recovery - Journaling - Soft updates - Log-structured file system - Distributed file system.							
Module:7	Storage Management, Protection and Security	6 hours					
Disk structure and attachment – Disk scheduling algorithms (seek time, rotational latency based)- System threats and security – Policy vs mechanism - Access vs authentication -							

System protection: Access matrix – Capability based systems - OS: performance, scaling, future directions in mobile OS.		
Module:8	Contemporary Issues	2 hours

BCSE304L	Theory of Computation	L T P C
		3 0 0 3
Pre-requisite	Nil	Syllabus version
		1.0
Course Objectives		
1. Types of grammars and models of automata. 2. Limitation of computation: What can be and what cannot be computed. 3. Establishing connections among grammars, automata and formal languages.		
Course Outcome		
On completion of this course, student should be able to: 1. Compare and analyse different computational models 2. Apply rigorously formal mathematical methods to prove properties of languages, grammars and automata. 3. Identify limitations of some computational models and possible methods of proving them. 4. Represent the abstract concepts mathematically with notations.		
Module:1	Introduction to Languages and Grammars	4 hours
Recall on Proof techniques in Mathematics - Overview of a Computational Models - Languages and Grammars - Alphabets - Strings - Operations on Languages, Overview on Automata		
Module:2	Finite State Automata	8 hours
Finite Automata (FA) - Deterministic Finite Automata (DFA) - Non-deterministic Finite Automata (NFA) - NFA with epsilon transitions – NFA without epsilon transition, conversion of NFA to DFA, Equivalence of NFA and DFA – minimization of DFA		
Module:3	Regular Expressions and Languages	7 hours
Regular Expression - FA and Regular Expressions: FA to regular expression and regular expression to FA - Pattern matching and regular expressions - Regular grammar and FA - Pumping lemma for regular languages - Closure properties of regular languages		
Module:4	Context Free Grammars	7 hours
Context-Free Grammar (CFG) – Derivations - Parse Trees - Ambiguity in CFG - CYK algorithm – Simplification of CFG – Elimination of Useless symbols, Unit productions, Null productions - Normal forms for CFG: CNF and GNF - Pumping Lemma for CFL - Closure Properties of CFL		
Module:5	Pushdown Automata	5 hours
Definition of the Pushdown automata - Languages of a Pushdown automata – Power of Non-Deterministic Pushdown Automata and Deterministic pushdown automata		
Module:6	Turing Machine	6 hours
Turing Machines as acceptor and transducer - Multi head and Multi tape Turing Machines – Universal Turing Machine - The Halting problem - Turing-Church thesis		
Module:7	Recursive and Recursively Enumerable Languages	6 hours
Recursive and Recursively Enumerable Languages, Language that is not Recursively Enumerable (RE) – computable functions – Chomsky Hierarchy – Undecidable problems - Post's Correspondence Problem		
Module:8	Contemporary Issues	2 hours
	Total Lecture hours:	45 hours

BCSE305L	Embedded Systems	L	T	P	C		
		3	0	0	3		
Pre-requisite	NIL	Syllabus version					
		1.0					
Course Objectives							
<p>1. To expose students to various challenges and constraints of special purpose computing systems in terms of resources and functional requirements.</p> <p>2. To introduce students to various components of typical embedded systems viz., sensors and actuators, data converters, UART etc., their interfacing, programming environment for developing any smart systems and various serial communication protocols for optimal components interfacing and communication.</p> <p>3. To make students understand the importance of program modeling, optimization techniques and debugging tools for product development and explore various solutions for real time scheduling issues in terms of resources and deadline.</p>							
Course Outcomes							
On completion of this course, students should be able to:							
<p>1. Identify the challenges in designing an embedded system using various microcontrollers and interfaces.</p> <p>2. To summaries the functionality of any special purpose computing system, and to propose smart solutions to engineering challenges at the prototype level.</p> <p>3. To examine the working principle and interface of typical embedded system components, create programme models, apply various optimization approaches including simulation environment and demonstration using debugging tools.</p> <p>4. To evaluate the working principle of serial communication protocols and their proper use, as well as to analyze the benefits and drawbacks of real-time scheduling algorithms and to recommend acceptable solutions for specific challenges.</p>							
Module:1	Introduction	5 hours					
Overview of Embedded Systems, Design challenges, Embedded processor technology, Hardware Design, Micro-controller architecture -8051, PIC, and ARM.							
Module:2	I/O Interfacing Techniques	8 hours					
Memory interfacing, A/D, D/A, Timers, Watch-dog timer, Counters, Encoder & Decoder, UART, Sensors and actuators interfacing.							
Module:3	Architecture of Special Purpose Computing System	6 hours					
ATM, Handheld devices, Data Compressor, Image Capturing Devices—Architecture and Requirements, Challenges & Constraints of special purpose computing system.							
Module:4	Programming Tools	7 hours					
Evolution of embedded programming tools, Modelling programs, Code optimization, Logic analyzers, Programming environment.							
Module:5	Real Time Operating System	8 hours					
Classification of Real time system, Issues & challenges in RTS, Real time scheduling schemes- EDF-RMS & Hybrid techniques, eCOS, POSIX, Prototreads.							
Module:6	Embedded Networking Protocols	5 hours					
Inter Integrated Circuits (I2C), Controller Area Network, Embedded Ethernet Controller, RS232, Bluetooth, Zigbee, Wifi.							
Module:7	Applications of Embedded Systems	4 hours					
Introduction to embedded system applications using case studies – Role in Agriculture sector, Automotive electronics, Consumer Electronics, Industrial controls, Medical Electronics.							
Module:8	Contemporary Issues	2 hours					

	Total Lecture hours:	45 hours
Text Book

BCSE306L	Artificial Intelligence	L	T	P	C		
		3	0	0	3		
Pre-requisite	NIL	Syllabus version		1.0			
Course Objectives							
<ol style="list-style-type: none"> 1. To impart artificial intelligence principles, techniques and its history. 2. To assess the applicability, strengths, and weaknesses of the basic knowledge representation, problem solving, and learning methods in solving engineering problems 3. To develop intelligent systems by assembling solutions to concrete computational problems 							
Course Outcomes							
On completion of this course, student should be able to:							
<ol style="list-style-type: none"> 1. Evaluate Artificial Intelligence (AI) methods and describe their foundations. 2. Apply basic principles of AI in solutions that require problem-solving, inference, perception, knowledge representation and learning. 3. Demonstrate knowledge of reasoning, uncertainty, and knowledge representation for solving real-world problems 4. Analyse and illustrate how search algorithms play a vital role in problem-solving 							
Module:1	Introduction	6 hours					
Introduction- Evolution of AI, State of Art -Different Types of Artificial Intelligence- Applications of AI-Subfields of AI-Intelligent Agents- Structure of Intelligent Agents- Environments							
Module:2	Problem Solving based on Searching	6 hours					
Introduction to Problem Solving by searching Methods-State Space search, Uninformed Search Methods – Uniform Cost Search, Breadth First Search- Depth First Search-Depth-limited search, Iterative deepening depth-first, Informed Search Methods- Best First Search, A* Search							
Module 3	Local Search and Adversarial Search	5 hours					
Local Search algorithms – Hill-climbing search, Simulated annealing, Genetic Algorithm, Adversarial Search: Game Trees and Minimax Evaluation, Elementary two-players games: tic-tac-toe, Minimax with Alpha-Beta Pruning.							
Module:4	Logic and Reasoning	8 hours					
Introduction to Logic and Reasoning -Propositional Logic-First Order Logic-Inference in First Order Logic- Unification, Forward Chaining, Backward Chaining, Resolution.							
Module:5	Uncertain Knowledge and Reasoning	5 hours					
Quantifying Uncertainty- Bayes Rule -Bayesian Belief Network- Approximate Inference in Bayesian networks							
Module:6	Planning	7 hours					
Classical planning, Planning as State-space search, Forward search, backward search, Planning graphs, Hierarchical Planning, Planning and acting in Nondeterministic domains – Sensor-less Planning, Multiagent planning							
Module:7	Communicating, Perceiving and Acting	6 hours					
Communication-Fundamentals of Language -Probabilistic Language Processing -Information Retrieval- Information Extraction-Perception-Image Formation- Object Recognition.							
Module:8	Contemporary Issues	2 hours					
		Total Lecture hours:		45 hours

Approved by Academic Council	No. 65	Date	17-03-2022

BCSE307L	Compiler Design	L	T	P	C			
		3	0	0	3			
Pre-requisite	NIL	Syllabus version						
		1.0						
Course Objectives								
<ol style="list-style-type: none"> 1. To provide fundamental knowledge of various language translators. 2. To make students familiar with lexical analysis and parsing techniques. 3. To understand the various actions carried out in semantic analysis. 4. To make the students get familiar with how the intermediate code is generated. 5. To understand the principles of code optimization techniques and code generation. 6. To provide foundation for study of high-performance compiler design. 								
Course Outcomes								
<ol style="list-style-type: none"> 1. Apply the skills on devising, selecting, and using tools and techniques towards compiler design 2. Develop language specifications using context free grammars (CFG). 3. Apply the ideas, the techniques, and the knowledge acquired for the purpose of developing software systems. 4. Constructing symbol tables and generating intermediate code. 5. Obtain insights on compiler optimization and code generation. 								
Module:1	INTRODUCTION TO COMPILATION AND LEXICAL ANALYSIS	7 hours						
Introduction to LLVM - Structure and Phases of a Compiler-Design Issues-Patterns-Lexemes-Tokens-Attributes-Specification of Tokens-Extended Regular Expression- Regular expression to Deterministic Finite Automata (Direct method) - Lex - A Lexical Analyzer Generator.								
Module:2	SYNTAX ANALYSIS	8 hours						
Role of Parser- Parse Tree - Elimination of Ambiguity – Top Down Parsing - Recursive Descent Parsing - LL (1) Grammars – Shift Reduce Parsers- Operator Precedence Parsing - LR Parsers, Construction of SLR Parser Tables and Parsing- CLR Parsing- LALR Parsing.								
Module:3	SEMANTICS ANALYSIS	5 hours						
Syntax Directed Definition – Evaluation Order - Applications of Syntax Directed Translation - Syntax Directed Translation Schemes - Implementation of L-attributed Syntax Directed Definition.								
Module:4	INTERMEDIATE CODE GENERATION	5 hours						
Variants of Syntax trees - Three Address Code- Types – Declarations - Procedures - Assignment Statements - Translation of Expressions - Control Flow - Back Patching- Switch Case Statements.								
Module:5	CODE OPTIMIZATION	6 hours						
Loop optimizations- Principal Sources of Optimization -Introduction to Data Flow Analysis - Basic Blocks - Optimization of Basic Blocks - Peephole Optimization- The DAG Representation of Basic Blocks -Loops in Flow Graphs - Machine Independent Optimization- Implementation of a naïve code generator for a virtual Machine- Security checking of virtual machine code.								
Module:6	CODE GENERATION	5 hours						
Issues in the design of a code generator- Target Machine- Next-Use Information - Register Allocation and Assignment- Runtime Organization- Activation Records.								
Module:7	PARALLELISM	7 hours						
Parallelization- Automatic Parallelization- Optimizations for Cache Locality and Vectorization- Domain Specific Languages-Compilation- Instruction Scheduling and Software Pipelining- Impact of Language Design and Architecture Evolution on Compilers- Static Single Assignment								
Module:8	Contemporary Issues	2 hours						

		Total Lecture hours:	45 hours

Pre-requisite	Syllabus version									
	1.0									
Course Objectives										
1. To provide fundamental knowledge of various language translators. 2. To make students familiar with phases of compiler. 3. To provide foundation for study of high-performance compiler design.										
Course Outcome										
1. Apply the skills on devising, selecting and using tools and techniques towards compiler design 2. Develop language specifications using context free grammars (CFG). 3. Apply the ideas, the techniques, and the knowledge acquired for the purpose of developing software systems. 4. Constructing symbol tables and generating intermediate code. 5. Obtain insights on compiler optimization and code generation.										
Indicative Experiments										
1.	Implementation of LEXR using LLVM.									
2.	Implementation of handwritten parser using LLVM									
3.	Generating code with the LLVM backend.									
4.	Defining a real programming language.									
5.	Write a recursive descent parser for the CFG language and implement it using LLVM.									
6.	Write a LR parser for the CFG language and implement it in the using LLVM.									
7.	Intro to Flex and Bison Modify the scanner and parser so that terminating a statement with "; b" instead of ";" results in the output being printed in binary.									
8.	Using LLVM-style RTTI for the AST and Generating IR from the AST.									
9.	Converting types from an AST description to LLVM types.									
10.	Emitting assembler text and object code.									
Total Laboratory Hours 30 hours										
Mode of assessment: CAT, FAT										
Text Book(s)										
1	Learn LLVM 12: A beginner's guide to learning LLVM compiler tools and core libraries with C++

BCSE308L	Computer Networks	L	T	P	C						
		3	0	0	3						
Pre-requisite	NIL	Syllabus version		1.0							
Course Objectives											
<ol style="list-style-type: none"> 1. To build an understanding among students about the fundamental concepts of computer networking, protocols, architectures, and applications. 2. To help students to acquire knowledge in design, implement and analyze performance of OSI and TCP-IP based Architectures. 3. To identify the suitable application layer protocols for specific applications and its respective security mechanisms. 											
Course Outcomes											
On completion of this course, student should be able to:											
<ol style="list-style-type: none"> 1. Interpret the different building blocks of Communication network and its architecture. 2. Contrast different types of switching networks and analyze the performance of network 3. Identify and analyze error and flow control mechanisms in data link layer. 4. Design sub-netting and analyze the performance of network layer with various routing protocols. 5. Compare various congestion control mechanisms and identify appropriate transport layer protocol for real time applications with appropriate security mechanism. 											
Module:1	Networking Principles and Layered Architecture	6 hours									
Data Communications and Networking: A Communications Model – Data Communications - Evolution of network, Requirements , Applications, Network Topology (Line configuration, Data Flow), Protocols and Standards, Network Models (OSI, TCP/IP)											
Module:2	Circuit and Packet Switching	7 hours									
Switched Communications Networks – Circuit Switching – Packet Switching – Comparison of Circuit Switching and Packet Switching – Implementing Network Software, Networking Parameters(Transmission Impairment, Data Rate and Performance)											
Module:3	Data Link Layer	8 hours									
Error Detection and Correction – Hamming Code , CRC, Checksum- Flow control mechanism – Sliding Window Protocol - GoBack - N - Selective Repeat - Multiple access Aloha - Slotted Aloha - CSMA, CSMA/CD – IEEE Standards(IEEE802.3 (Ethernet), IEEE802.11(WLAN))- RFID- Bluetooth Standards											
Module:4	Network Layer	8 hours									
IPv4 Address Space – Notations – Classful Addressing – Classless Addressing – Network Address Translation – IPv6 Address Structure – IPv4 and IPv6 header format											
Module:5	Routing Protocols	6 hours									
Routing-Link State and Distance Vector Routing Protocols- Implementation-Performance Analysis- Packet Tracer											
Module:6	Transport Layer	5 hours									
TCP and UDP-Congestion Control-Effects of Congestion-Traffic Management-TCP Congestion Control-Congestion Avoidance Mechanisms-Queuing Mechanisms-QoS Parameters											
Module:7	Application layer	3 hours									
Application layer-Domain Name System-Case Study : FTP-HTTP-SMTP-SNMP											
Module:8	Contemporary Issues	2 hours									
Total Lecture hours:											
45 hours

BCSE309L	Cryptography and Network Security	L	T	P	C				
		3	0	0	3				
Pre-requisite	NIL	Syllabus version		1.0					
Course Objectives									
<ol style="list-style-type: none"> 1. To explore the concepts of basic number theory and cryptographic techniques. 2. To impart concept of Hash and Message Authentication, Digital Signatures and authentication protocols. 3. To reveal the basics of transport layer security, Web Security and various types of System Security. 									
Course Outcomes									
On completion of this course, students should be able to:									
<ol style="list-style-type: none"> 1. To know the fundamental mathematical concepts related to security. 2. To understand concept of various cryptographic techniques. 3. To apprehend the authentication and integrity process of data for various applications 4. To know fundamentals of Transport layer security, web security, E-Mail Security and IP Security 									
Module:1	Fundamentals of Number Theory	5 hours							
Finite Fields and Number Theory: Modular arithmetic, Euclidian Algorithm, Primality Testing: Fermats and Eulers theorem, Chinese Remainder theorem, Discrete Logarithms.									
Module:2	Symmetric Encryption Algorithms	7 hours							
Symmetric key cryptographic techniques: Introduction to Stream cipher, Block cipher: DES, AES,IDEA, Block Cipher Operation, Random Bit Generation and RC4									
Module:3	Asymmetric Encryption Algorithm and Key Exchange	8 hours							
Asymmetric key cryptographic techniques: principles, RSA, ElGamal, Elliptic Curve cryptography, Homomorphic Encryption and Secret Sharing, Key distribution and Key exchange protocols, Diffie-Hellman Key Exchange, Man-in-the-Meddle Attack									
Module:4	Message Digest and Hash Functions	5 hours							
Requirements for Hash Functions, Security of Hash Functions, Message Digest (MD5), Secure Hash Function (SHA), Birthday Attack, HMAC									
Module:5	Digital Signature and Authentication Protocols	7 hours							
Authentication Requirements, Authentication Functions, Message Authentication Codes, Digital Signature Authentication, Authentication Protocols, Digital Signature Standards, RSA Digital Signature, Elgamal based Digital Signature, Authentication Applications: Kerberos, X.509 Authentication Service, Public Key Infrastructure (PKI)									
Module:6	Transport Layer Security and IP Security	4 hours							
Transport-Layer Security, Secure Socket Layer(SSL),TLS, IP Security: Overview: IP Security Architecture, Encapsulating Payload Security									
Module:7	E-mail, Web and System Security	7 hours							
Electronic Mail Security, Pretty Good Privacy (PGP), S/MIME, Web Security: Web Security Considerations, Secure Electronic Transaction Protocol Intruders, Intrusion Detection, Password Management, Firewalls: Firewall Design Principles, Trusted Systems.									
Module:8	Contemporary Issues	2 hours							
		Total Lecture hours:		45 hours

BCSE309P	Cryptography and Network Security Lab	L	T	P	C							
		0	0	2	1							
Pre-requisite	NIL	Syllabus version		1.0								
Course Objectives												
<p>1. Understand various Private and Public Key cryptographic algorithms.</p> <p>2. To learn about hash functions and digital signature algorithms</p> <p>3. Acquire knowledge in various network security models</p>												
Course Outcome												
On completion of this course, students should be able to:												
<p>1. Implement various cipher techniques without using standard cryptographic library functions</p> <p>2. Develop the various hash functions and digital signature algorithms for different applications</p> <p>3. Develop various secured networking-based application</p>												
Indicative Experiments												
1.	Consider a sender and receiver who need to exchange data confidentially using symmetric encryption. Write program that implements DES encryption and decryption using a 64 bit key size and 64 bit block size											
2.	Consider a sender and receiver who need to exchange data confidentially using symmetric encryption. Write program that implements AES encryption and decryption using a 64/128/256 bits key size and 64 bit block size.											
3	Develop an chipper scheme by using RSA											
4.	Develop a MD5 hash algorithm that finds the Message Authentication Code (MAC)											
5	Find a Message Authentication Code (MAC) for given variable size message by using SHA-128 and SHA-256 Hash algorithm Measure the Time consumptions for varying message size for both SHA-128 and SHA-256.											
6	Develop the Digital Siganture standard(DSS)for verifying the legal communicating parties											
7	Design a Diffie Hellman multiparty key exchange protocol and perform Man-in-the-Middle Attack.											
8	Develop a simple client and server application using SSL socket communication											
9	Develop a simple client server model using telnet and capture the packets transmitted with tshark Analyze the pcap file and get the transmitted data (plain text) using any packet capturing library. Implement the above scenario using SSH and observe the data											
10	Develop a web application that implements JSON web token

SPECIALIZATION ELECTIVE

(2023-2024)

B.Tech. Computer Science and Engg with Spec. in Data Science

Course code	Course Title	L	T	P	C				
BCSE206L	Foundations of Data Science	3	0	0	3				
Pre-requisite	NIL	Syllabus version		1.0					
Course Objectives									
<ol style="list-style-type: none"> 1. To provide fundamental knowledge on data science with querying and analytics required for the field of data science. 2. To understand the process of handling heterogeneous data, pre-process and visualize them for better understanding. 3. To gain the fundamental knowledge on data science tools and gain basic skill set to solve real-time data science problems. 									
Course Outcome									
Upon completion of the course the student will be able to									
<ol style="list-style-type: none"> 1. Ability to obtain fundamental knowledge on data science. 2. Demonstrate proficiency in data analytics. 3. Apply advanced tools to work on dimensionality reduction and mathematical operations. 4. Handle various types of data and visualize them using through programming for knowledge representation. 5. Demonstrate numerous open source data science tools to solve real-world problems through industrial case studies. 									
Module:1	Data Science Context	5 hours							
Need for Data Science – What is Data Science - Data Science Process – Business Intelligence and Data Science – Prerequisites for a Data Scientist – Tools and Skills required.									
Module:2	Databases for Data Science	7 hours							
Structured Query Language (SQL): Basic Statistics, Data Munging, Filtering, Joins, Aggregation, Window Functions, Ordered Data, preparing No-SQL: Document Databases, Wide-column Databases and Graphical Databases.									
Module:3	Data Science Methodology	8 hours							
Analytics for Data Science – Examples of Data Analytics – Data Analytics Lifecycle: Data Discovery, Data Preparation, Model Planning, Model Building, Communicate Results.									
Module:4	Data Analytics on Text	7 hours							
Major Text Mining Areas – Information Retrieval – Data Mining – Natural Language Processing (NLP) – Text analytics tasks: Cleaning and Parsing, Searching, Retrieval, Text Mining, Part-of-Speech Tagging, Stemming, Text Analytics Pipeline. NLP: Major components of NLP, stages of NLP, and NLP applications.									
Module:5	Platform for Data Science	6 hours							
Python for Data Science – Python Libraries – Data Frame Manipulation with numpy and pandas – Exploration Data Analysis – Time Series Dataset – Clustering with Python – Dimensionality Reduction. Python integrated Development Environments (IDE) for Data Science.									
Module:6	GNU Octave for Mathematical Operations	6 hours							
Handling Vectors and Matrices: Multiplication, Transpose, Random Matrix creation, Eigen Vectors and Eigen Values, Determinants. Arithmetic Operations – Set Operations – Plotting Data.									
Module:7	Tableau	4 hours							
Tableau Introduction – Dimensions, Measures, Descriptive Statistics, Basic Charts, Dashboard Design Principles, Special Chart Types, Integrate Tableau with Google Sheets.									
Module:8	Contemporary Issues	2 hours							

	Total Lecture hours:	45 hours

Course Objectives											
<ol style="list-style-type: none"> 1. To provide necessary knowledge on data manipulation and to perform analysis on the practical problems using a programming approach. 2. To generate report and visualize the results in graphical form using programming tools. 3. To learn and implement R programs for data science. 											
Course Outcome											
Upon completion of the course, the student will be able to											
<ol style="list-style-type: none"> 1. Engrave and use R language to solve problems. 2. Design a suitable form for analysis from real-time data. 3. Formulate insights from the data through statistical inferences. 4. Evaluate and visualize the results, analyze the performance of the models. 											
Module:1 Functions in R	2 hours										
Programming with R- Running R Code - Including Comments - Defining Variables, Functions -Built-in R Functions - Loading Functions - Writing Functions - Using Conditional Statements.											
Module:2 Vectors and Lists	3 hours										
Vector - Vectorized Operations - Vector Indices - Vector Filtering - Modifying Vectors, Lists - Creating Lists - Accessing List Elements - Modifying Lists- Applying Functions to Lists with lapply().											
Module:3 Data Wrangling	4 hours										
Understanding Data - The Data Generation Process - Finding Data - Types of Data - Interpreting Data - Using Data to Answer Questions - Data Frames - Working with Data Frames -Working with CSV Data.											
Module:4 Manipulating Data with dplyr and tidyverse	5 hours										
Data Manipulation - Core dplyr Functions- Performing Sequential Operations -Analyzing Data Frames by Group - Joining Data Frames Together - dplyr in Action: Analyzing Flight Data- Reshaping Data with tidyverse -From Columns to Rows: gather() - From Rows to Columns: spread() - tidyverse in Action: Exploring Educational Statistics.											
Module:5 Accessing Databases and Web APIs	5 hours										
An Overview of Relational Databases -A Taste of SQL-Accesing a Database from R - Accessing Web APIs -RESTful Requests -Accessing Web APIs from R -Processing JSON Data -APIs in Action: Finding Cuban Food in Seattle.											
Module:6 Data Visualization	6 hours										
Designing Data Visualizations - The Purpose of Visualization - Selecting Visual Layouts - Choosing Effective Graphical Encodings - Expressive Data Displays - Enhancing Aesthetics - Creating Visualizations with ggplot2- A Grammar of Graphics - Basic Plotting with ggplot2 - Complex Layouts and Customization - Building Maps- ggplot2 in Action: A case study.											
Module:7 Interactive Visualization in R	3 hours										
The Plotly Package - The Rbokeh Package - The Leaflet Package - Interactive Visualization in Action: Exploring Changes to the City of Seattle.											
Module:8 Contemporary Issues	2 hours										
	Total Lecture hours:	30 hours

<ol style="list-style-type: none"> 1. To introduce the fundamental processes data warehousing and major issues in data mining. 2. To impart the knowledge on various data mining concepts and techniques that can be applied to text mining, web mining etc. 3. To develop the knowledge for application of data mining and social impacts of data mining. 									
Course Outcome									
Upon completion of the course the student will be able to									
<ol style="list-style-type: none"> 1. Interpret the contribution of data warehousing and data mining to the decision-support systems. 2. Construct the data needed for data mining using preprocessing techniques. 3. Discover interesting patterns from large amounts of data using Association Rule Mining. 4. Extract useful information from the labeled data using various classifiers and Compile unlabeled data into clusters applying various clustering algorithms. 5. Demonstrate capacity to perform a self-directed piece of practical work that requires the application of data mining techniques. 									
Module:1	Data Warehousing	4 hours							
Introduction to Data warehouse - Data Warehouse models- Data warehouse architecture: Three-tier data warehouse architecture - Data warehouse modeling: Data cube and OLAP – Star and Snowflake Schema.									
Module:2	Introduction to Data Mining	3 hours							
Introduction to data mining - Data mining functionalities - Steps in data mining process- Classification of data mining systems - Major issues in data mining.									
Module:3	Data Preprocessing	3 hours							
Data Preprocessing: An overview - Data cleaning - Data integration -Data reduction - Data transformation.									
Module:4	Frequent Pattern Mining	4 hours							
Frequent Pattern Mining: Basic Concepts and a Road Map - Efficient and scalable frequent item set mining methods: Apriori algorithm, FP-Growth algorithm - Mining frequent item sets using vertical data format.									
Module:5	Classification Techniques	5 hours							
General approach to classification - Classification by decision tree induction - Bayes classification methods - Model evaluation and selection - Techniques to improve classification accuracy - advanced classification methods: Bayesian belief networks- Lazy learners.									
Module:6	Cluster Analysis	5 hours							
Types of data in cluster analysis - Partitioning methods - K Medoid Clustering - Density based methods - Grid based methods - Outlier analysis.									
Module:7	Data Mining Trends and Research Frontiers	4 hours							
Overview of Web mining-Temporal and Spatial mining-Other methodologies of data mining: Statistical data mining- Data mining applications.									
Module:8	Contemporary Issues	2 hours

Course code	Course Title	L	T	P	C						
BCSE209L	Machine Learning	3	0	0	3						
Pre-requisite	NIL	Syllabus version		1.0							
Course Objectives											
<ol style="list-style-type: none"> To teach the theoretical foundations of various learning algorithms. To train the students better understand the context of supervised and unsupervised learning through real-life examples. To understand the need for Reinforcement learning in real – time problems. Apply all learning algorithms over appropriate real-time dataset. Evaluate the algorithms based on corresponding metrics identified. 											
Course Outcome											
At the end of this course, student will be able to:											
<ol style="list-style-type: none"> Understand, visualize, analyze and preprocess the data from a real-time source. Apply appropriate algorithm to the data. Analyze the results of algorithm and convert to appropriate information required for the real – time application. Evaluate the performance of various algorithms that could be applied to the data and to suggest most relevant algorithm according to the environment. 											
Module:1	Introduction to Machine Learning and Pre-requisites	4 hours									
Introduction to Machine Learning – Learning Paradigms – PAC learning – Version Spaces – Role of Machine Learning in Artificial Intelligence applications.											
Module:2	Supervised Learning – I	7 hours									
Linear and Non-Linear examples – Multi-Class & Multi-Label classification – Linear Regression – Multiple Linear Regression – Naïve Bayes Classifier – Decision Trees – ID3 – CART – Error bounds.											
Module:3	Supervised Learning – II	8 hours									
K-NN classifier – Logistic regression – Perceptron – Single layer & Multi-layer – Support Vector Machines – Linear & Non-linear – Metrics & Error Correction.											
Module:4	Unsupervised Learning	9 hours									
Clustering basics (Partitioned, Hierarchical and Density based) - K-Means clustering – K-Mode clustering – Self organizing maps – Expectation maximization – Principal Component Analysis – Kernel PCA – tSNE (t-distributed stochastic neighbor embedding) - Metrics & Error Correction.											
Module:5	Ensemble Learning	5 hours									
Bias – Variance Tradeoff – Bagging and Boosting (Random forests, Adaboost, XG boost inclusive) – Metrics & Error Correction.											
Module:6	Machine Learning in Practice	3 hours									
Class Imbalance – SMOTE – One Class SVM – Optimization of hyper parameters.											
Module:7	Reinforcement Learning (RL)	8 hours									
Basics of RL – RL Framework – Markov Decision Process – Exploration Vs Exploitation - Policies, Value Functions and Bellman Equations – Solution Methods – Q-learning.											
Module:8	Contemporary Issues	1 hour									
	Total Lecture hours:	45 hours									
Text Book(s)

Course Objectives

1. To teach the theoretical foundations of various learning algorithms.
2. To train the students better understand the context of supervised and unsupervised learning through real-life examples.
3. To understand the need for Reinforcement learning in real – time problems.
4. Apply all learning algorithms over appropriate real-time dataset.
5. Evaluate the algorithms based on corresponding metrics identified.

Course Outcome

1. At the end of this course, student will be able to:
2. Understand, visualize, analyze and preprocess the data from a real-time source.
3. Apply appropriate algorithm to the data.
4. Analyze the results of algorithm and convert to appropriate information required for the real – time application.
5. Evaluate the performance of various algorithms that could be applied to the data and to suggest most relevant algorithm according to the environment.

Indicative Experiments

1. Linear & Multiple Linear Regression
2. Naïve Bayes classifier
3. Decision trees – ID3 & CART
4. Logistic regression
5. Support Vector Machines – Linear & Non-linear
6. Single & Multilayer Perceptron
7. K-NN, K-Means & K-mode clustering
8. Random – forest
9. Adaboost, XGboost
10. Principal component analysis
11. Self – Organizing maps
12. Q-Learning

Course code	Course Title	L	T	P	C				
BCSE331L	Exploratory Data Analysis	2	0	0	2				
Pre-requisite	NIL	Syllabus version		1.0					
Course Objectives									
<ol style="list-style-type: none"> 1. The course introduces the methods for data preparation and data understanding. 2. It covers essential exploratory techniques for understanding multivariate data by summarizing it through statistical and graphical methods. 3. Supports to summarize use of predictive analytics, data science and data visualization. 									
Course Outcomes									
At the end of the course, the student will be able to									
<ol style="list-style-type: none"> 1. Handle missing data in the real world data sets by choosing appropriate methods. 2. Summarize the data using basic statistics. Visualize the data using basic graphs and plots. 3. Identify the outliers if any in the data set. 4. Choose appropriate feature selection and dimensionality reduction. 5. Apply Techniques for handling multi-dimensional data. 									
Module:1	Introduction to Exploratory Data Analysis	4 hours							
Introduction to Exploratory Data Analysis (EDA) –Steps in EDA, Data Types: Numerical Data – Discrete data, continuous data – Categorical data – Measurement Scales: Nominal, Ordinal, Interval, Ratio – Comparing EDA with classical and Bayesian Analysis – Software tools for EDA.									
Module:2	Data Transformation	4 hours							
Transformation Techniques: Performing data deduplication - replacing values – Discretization and binning. Introduction to Missing data, handling missing data: Traditional methods - Maximum Likelihood Estimation.									
Module:3	Correlation Analysis and Time Series Analysis	4 hours							
Types of analysis: Univariate analysis - bivariate analysis - multivariate analysis. Time Series Analysis (TSA): Fundamentals of TSA - characteristics of TSA – Time based indexing - visualizing time series – grouping time series data - resampling time series data.									
Module:4	Data Summarization and Visualization	4 hours							
Statistical summary measures, data elaboration, 1-D Statistical data analysis, 2-D Statistical data Analysis, contingency tables, n-D Statistical data analysis. Visualization: Scatter plots – Dot charts - Bar plots.									
Module:5	Clustering Algorithms	4 hours							
Introduction to Spectral clustering – Document clustering – Minimum Spanning Tree clustering. Overview of Model-based clustering – Expectation-Maximization algorithm – Hierarchical Agglomerative model-based clustering. Outlier detection using Clustering.									
Module:6	Dimensionality Reduction	4 hours							
Linear Methods: Principal Component Analysis (PCA) – Singular Value Decomposition – Factor Analysis -Intrinsic Dimensionality. Non Linear methods: Multidimensional Scaling – Manifold Learning – Self-Organizing Maps.									
Module:7	Model Development and Evaluation	4 hours							
Constructing linear regression model – evaluation – computing accuracy – understanding accuracy. Understanding reinforcement learning: Difference between supervised and reinforcement learning – Applications of reinforcement learning.									
Module:8	Contemporary Issues	2 hours							

	Total Lecture hours:	30hours

Pre-requisite	NIL			Syllabus version										
Course Objectives														
<ol style="list-style-type: none"> 1. Emphasize the importance of programming in EDA. 2. Familiarize the student with R programming for various tasks. 3. Explore data structures and file processing facilities in R language. 														
Course Outcomes														
At the end of the course, the student will be able to														
<ol style="list-style-type: none"> 1. Engrave simple R programs. 2. Debug and execute R programs using R studio. 3. Implement several algorithms in R language. 														
Indicative Experiments														
1.	Data transformation and pre-processing. Write R programs to read data from keyboard and transform it to various ranges like [-3,+3], [-1,+1], [0,1] etc.			4 hours										
2.	Write R programs to read data from keyboard or text files and compute summary measures like arithmetic mean, median, mode, variance and standard deviation. Also read a set of X,Y values and find covariance and correlation, use statistical techniques to identify outlier data			6 hours										
3.	Estimation of missing data, global methods, class based methods, multiple imputation methods etc			6 hours										
4.	Exploratory Data Analysis for Structured Data			4 hours										
4.	Write R programs to implement the k-means clustering algorithm by reading the data and user-specified value of k. Display the characteristics of the clusters found by the algorithm.			6 hours										
5.	Write R programs for nearest neighbour algorithms for classification			4 hours

<ol style="list-style-type: none"> 1. Introduce major deep neural network frameworks and issues in basic neural networks. 2. To solve real world applications using Deep learning. 									
Course Outcomes									
At the end of this course, student will be able to:									
<ol style="list-style-type: none"> 1. Understand the methods and terminologies involved in deep neural network, differentiate the learning methods used in Deep-nets. 2. Identify and apply suitable deep learning approaches for given application. 3. Design and develop custom Deep-nets for human intuitive applications. 4. Design of test procedures to assess the efficiency of the developed model. 5. To understand the need for Reinforcement learning in real – time problems. 									
Module:1	Introduction to neural networks and deep neural networks	7 hours							
Neural Networks Basics - Functions in Neural networks – Activation function, Loss function - Function approximation - Classification and Clustering problems - Deep networks basics - Shallow neural networks – Activation Functions – Gradient Descent – Back Propagation – Deep Neural Networks – Forward and Back Propagation – Parameters – Hyperparameters.									
Module:2	Improving deep neural networks	8 hours							
Mini-batch Gradient Descent – Exponential Weighted Averages – Gradient Descent with Momentum – RMSProp and Adam Optimization – Hyperparameter tuning – Batch Normalization – Softmax Regression – Softmax classifier – Deep Learning Frameworks – Data Augmentation - Under-fitting Vs Over-fitting.									
Module:3	Convolution neural networks	6 hours							
Foundations of Convolutional Neural Networks – CNN operations – Architecture – Simple Convolution Network – Deep Convolutional Models – ResNet, AlexNet, InceptionNet and others.									
Module:4	Recurrent networks	6 hours							
Recurrent Neural Networks - Bidirectional RNNs, Encoder, Decoder, Sequence-to-Sequence Architectures, Deep Recurrent Networks, Auto encoders - Bidirectional Encoder Representations from Transformers (BERT).									
Module:5	Recursive neural networks	6 hours							
Long-Term Dependencies - Echo State Networks - Long Short-Term Memory and Other Gated RNNs - Optimization for Long-Term Dependencies - Explicit Memory.									
Module:6	Advanced Neural networks	6 hours							
Transfer Learning – Transfer Learning Models – Generative Adversarial Network and their variants – Region based CNN – Fast RCNN - You Only Look Once – Single shot detector.									
Module:7	Deep reinforcement learning	5 hours							
Deep Reinforcement Learning – Q-Learning – Deep Q-Learning – Policy Gradients - Advantage Actor Critic (A2C) and Asynchronous Advantage Actor Critic (A3C) – Model based Reinforcement Learning – Challenges.									
Module:8	Contemporary issues	1 hour

BCSE333L	Statistical Inference	2	0	0	2				
Pre-requisite	NIL	Syllabus version		1.0					
Course Objectives									
<ol style="list-style-type: none"> 1. To study statistical methods for hypotheses testing and solving inference problems. 2. To interpret the results in a way that draws evidence-based and well-informed decisions from data. 3. To derive conclusions from data and analyze its implications. 									
Course Outcomes									
At the end of the course, the student will be able to									
<ol style="list-style-type: none"> 1. Understand the notion of a parametric model, point estimation of the parameters and properties of a good estimator. 2. Learn the concept of interval estimation and confidence intervals. 3. Understand and perform large-sample tests of hypotheses. 4. Discuss nonparametric tests of hypotheses. 5. Translate and correlate the statistical analysis into Statistical inference 									
Module:1	Introduction to Estimator	4 hours							
Population, sample, parameter and statistic- Estimator, Estimate-characteristics of a good estimator – Unbiasedness- Consistency-Invariance property of Consistent estimator- Sufficient condition for consistency- Sufficiency- Factorization Theorem- Minimal sufficiency- Efficiency- Applications of Lehmann-Scheffe's theorem, Rao - Blackwell Theorem and applications. Bayesian Estimation.									
Module:2	Point Estimation	5 hours							
Methods of point estimation- Maximum likelihood method (the asymptotic properties of ML estimators are not included), Large sample properties of ML estimator (without proof)- applications of MLE, Method of Minimum variance, method of moments, method of least squares, method of minimum chi-square.									
Module:3	Interval Estimation	3 hours							
Confidence limits and confidence coefficient; Duality between acceptance region of a test and a confidence interval; Construction of confidence intervals for population proportion (small and large samples) and between two population proportions(large samples); Confidence intervals for mean and variance of a normal population; Difference between the mean and ratio of two normal populations.									
Module:4	Testing of hypotheses	4 hours							
Types of errors, power of a test, most powerful tests; Neyman-Pearson Fundamental Lemma and its applications; Notion of Uniformly most powerful tests; Likelihood Ratio tests: Description and property of LR tests - Application to standard distributions.									
Module:5	Large sample tests	4 hours							
Large sample properties; Tests of significance (under normality assumption)- Test for a single population mean, proportion; Test for equality of two means, proportions; Test for variance, Test for correlation and Test for Regression.									
Module:6	Small sample tests	4 hours							
Student's t-test, test for a population mean, equality of two population means, paired t-test, F-test for equality of two population variances; Chi-square test for goodness of fit, independence of attributes.									
Module:7	Non-parametric tests	4 hours							
Sign test, Wilcoxon Signed rank test, Median test, Wilcoxon-Mann-Whitney test, Run test and One sample Kolmogorov Smirnov test, Kruskal Wallis-H-test: Description, properties and applications.									

Module:8	Contemporary Issues	2 hours
	Total hours	30 hours

Course Code	Course Title	L	T	P	C				
BCSE334L	Predictive Analytics	3	0	0	3				
Pre-requisite	NIL	Syllabus version		1.0					
Course Objectives									
<ol style="list-style-type: none"> 1. Learn the fundamental principles of analytics for business and learn how to Visualize and explore data to better understand relationships among variables. 2. To understand the techniques of modeling and examine how predictive analytics can be used in decision making. 3. Apply predictive models to generate predictions for new data. 									
Expected Course Outcome									
Upon completion of the course the student will be able to									
<ol style="list-style-type: none"> 1. Understand the importance of predictive analytics and processing of data for analysis. 2. Describe different types of predictive models. 3. Apply regression and classification model on applications for decision making and evaluate the performance. 4. Analyze the impact of class imbalance on performance measure for model predictions and models that can mitigate the issue during training. 5. Define and apply time series forecasting models in a variety of business contexts. 									
Module:1	Introduction to Analytics	5 hours							
Introduction to predictive analytics – Business analytics: types, applications- Models: predictive models – descriptive models – decision models - applications - analytical techniques.									
Module:2	Data Pre-processing and Model Tuning	6 hours							
Data transformations: Individual predictors, Multiple predictors, Dealing with missing values, Removing, Adding, Binning Predictors, Computing, Model Tuning, Data Splitting, Resampling.									
Module:3	Predictive Modeling	6 hours							
Propensity models, cluster models, collaborative filtering, applications and fundamental limitations. Statistical Modeling- Formal Definition, Model Comparison, Classification.									
Module:4	Comparison of Regression Models	7 hours							
Measuring Performance in Regression Models - Linear Regression and Its Cousins - Non-Linear Regression Models - Regression Trees and Rule-Based Models Case Study: Compressive Strength of Concrete Mixtures.									
Module:5	Comparison of Classification Models	7 hours							
Measuring Performance in Classification Models - Discriminant Analysis and Other Linear Classification Models - Non-Linear Classification Models - Classification Trees and Rule-Based Models - Model Evaluation Techniques.									
Module:6	Remedies for Severe Class Imbalance	6 hours							
The Effect of Class Imbalance - Model Tuning - Alternate Cutoffs - Adjusting Prior Probabilities - Unequal Case Weights - Sampling Methods - Cost-Sensitive Training. Measuring Predictor Importance - Factors that can affect Model Performance.									
Module:7	Time Series Analysis	6 hours							
Methods for time series analyses – Analysis: Motivation – Exploratory analysis – Prediction and forecasting – Classification – Regression analysis – Signal estimation – Segmentation. Models – Autoregressive model - Partial autocorrelation function.									
Module:8	Contemporary Issues	2 hours							
	Total Lecture Hours:	45 hours

Course code	Course Title	L	T	P	C
BCSE335L	Healthcare Data Analytics	3	0	0	3
Pre-requisite	NIL			Syllabus version	1.0

Course Objectives

1. Describe how data-based healthcare can help in improving outcomes for patient health.
2. To design data models that combine patient records from multiple sources to form a patient centric view of data.
3. To use data analytics to find health concerns and solutions to the problem faced by a patient.
4. To find meaningful patterns and trends in healthcare data to help the overall population.

Course Outcomes

At the end of the course, the student will be able to

1. Explain the concepts of Healthcare Data Analytics and healthcare foundations.
2. Apply machine learning techniques on healthcare data analytics.
3. Measure and analyse the quality of health-care systems.
4. Develop models for effective predictions in healthcare applications.
5. Use modern day emerging technologies in healthcare data analytics process.

Module:1	Introduction to Healthcare Data Analytics	3 hours
-----------------	--	----------------

Introduction – Need for Healthcare Analytics - Foundations of Healthcare Analytics – Examples of Healthcare Analytics.

Module:2	Healthcare Foundations	5 hours
-----------------	-------------------------------	----------------

Healthcare delivery - Healthcare financing - Healthcare policy – Handling Patient data: the journey from patient to computer - Standardized clinical codesets - Breaking down healthcare analytics: population, medical task, data format, disease.

Module:3	Machine Learning Foundations for Healthcare	8 hours
-----------------	--	----------------

Model frameworks for medical decision making: Tree-like reasoning, Probabilistic reasoning and Bayes theorem, Criterion tables and the weighted sum approach, Pattern association and neural networks - Machine learning pipeline: Loading the data, Cleaning and preprocessing the data, Exploring and visualizing the data, Selecting features, Training the model parameters, Evaluating model performance.

Module:4	Measuring Healthcare Quality	8 hours
-----------------	-------------------------------------	----------------

Introduction to healthcare measures, Medicare value-based programs: The Hospital Value-Based Purchasing (HVBP) program, The Hospital Readmission Reduction (HRR) program, The Hospital-Acquired Conditions (HAC) program, The End-Stage Renal Disease (ESRD) quality incentive program, The Skilled Nursing Facility Value-Based Program (SNFVBP), The Home Health Value-Based Program (HHVBP), The Merit-Based Incentive Payment System (MIPS).

Module:5	Making Predictive Models in Healthcare	8 hours
-----------------	---	----------------

Introduction to Predictive Analytics – Obtaining and Importing the NHAMCS Dataset – Making the Response Variable - Splitting the Data into Train and Test Sets - Preprocessing the Predictor Variables – Building the Models – Using the Models to Make Predictions – Improving our Models.

Module:6	Healthcare Analytics Applications	6 hours
-----------------	--	----------------

Introduction - Descriptive Analytics Applications - Predictive Analytics Applications - Prescriptive Analytics Application.

Module:7	Healthcare and Emerging Technologies	5 hours
-----------------	---	----------------

Healthcare analytics and the internet - Healthcare and the Internet of Things - Healthcare

analytics and social media - Healthcare and deep learning - Obstacles, ethical issues, and limitations.		
Module:8	Contemporary Issues	2 hours
	Total Lecture hours	45 hours

BCSE336L	Financial Data Analytics			2	0	0	2							
Pre-requisite	NIL			Syllabus version										
				1.0										
Course Objectives														
<p>1. To learn to model financial time series using liner ARMA type time series.</p> <p>2. To study and analyze to test and model heteroscedastic effects using ARCH / GARCH type time series.</p> <p>3. To learn how to test for unit root and construct ARMA models.</p>														
Course Outcomes														
At the end of the course, the student will be able to														
<p>1. Approach and analyze any financial data.</p> <p>2. Differentiate between various time series models.</p> <p>3. Perform cross-validation of various financial models developed.</p> <p>4. Forecast future observations on financial data.</p>														
Module:1	Financial data and their properties			4 hours										
Asset Returns – Bond Yields and Prices – Implied Volatility – Examples and Visualization of financial data – Multivariate returns.														
Module:2	Linear models for financial time series			4 hours										
Simple autoregressive models – Simple moving average models – Simple ARMA models – Unit Root nonstationarity – Exponential smoothing.														
Module:3	Seasonal and Long memory models			4 hours										
Seasonal models – Regression models with time series errors – Long memory models.														
Module:4	Asset Volatility and Volatility models			4 hours										
Characteristics of Volatility – Structure of a model – Testing for ARCH Effect – ARCH Model – GARCH Model – GARCH-M Model – Exponential Garch Model – Threshold GARCH model – Stochastic volatility model – alternative approaches.														
Module:5	Applications of Volatility Models			4 hours										
Garch Volatility Term structure – Option pricing and hedging – Time Varying Correlations and Betas – Minimum Variance Portfolios – Prediction.														
Module:6	High Frequency Financial Data			4 hours										
Nonsynchronous trading – Bid ask spread of trading prices – Empirical characteristics of trading data – Models for price changes.														
Module:7	Value at Risk			4 hours										
Risk measure and Coherence – Risk metrics –Extreme value approach to Value at Risk – Peak over thresholds.														
Module:8	Contemporary Issues			2 hours										
				Total Lecture hours:										
				30 hours										
Text Book(s)														
1.	Ruey S. Tsay An Introduction to Analysis of Financial Data with R, Wiley, 2013.													
Reference Books														
1.	Analysis of Financial Time Series, by Ruey S. Tsay, 3rd edition, Wiley Series in Probability and Statistics, 2010.													
2.	William G. Foote, Financial Engineering Analytics: A Practice Manual Using R, 2018.													
3.	Statistical Analysis of Time-Series Data in SPlus, by Ren'e Carmona, Springer, March 4, 2004.													
Mode of Evaluation: CAT / written assignment / Quiz / FAT / Project / Seminar														
Recommended by Board of Studies		12-05-2022												
Approved by Academic Council		No. 66	Date	16-06-2022										

Course code	Course Title			L	T	P	C							
BCSE336P	Financial Data Analytics Lab			0	0	2	1							
Pre-requisite	NIL			Syllabus version										
Course Objectives														
<ol style="list-style-type: none"> 1. Learn how to model financial time series using liner ARMA type time series. 2. Study how to test and model heteroscedastic effects using ARCH / GARCH type time series. 3. Acquire how to test for unit root and construct ARMA models. 														
Course Outcome														
At the end of the course, the student will be able to														
<ol style="list-style-type: none"> 1. Approach and analyze any financial data. 2. Differentiate between various time series models. 3. Perform cross-validation of various financial models developed. 4. Forecast future observations on financial data. 														
Indicative Experiments														
1.	Given a simple daily return of a concern as data, implement and execute a R program to compute the sample mean, standard deviation, skewness, excess kurtosis, minimum and maximum of each simple return series.					8 hours								
2.	Consider the daily range (daily high–daily low) of Apple stock from January 2, 2007 to December 23, 2011. One can obtain the data by the package quantmod from Yahoo. Compute the first 100 lags of ACF of the series. Is there evidence of long-range dependence? Why? If the range series has long memory, build an ARMA model for the data.					8 hours								
3.	Consider the 30-year conventional mortgage rates from April 1971 to November 2011. Build a pure time series model for the monthly mortgage rate. Perform model checking and find the fitted model.					8 hours								
4.	Use the quantmod package to obtain the daily prices of Apple stock from January 2, 2007, to November 30, 2011. Use an ARMA–GARCH model to obtain the daily volatility of the stock. Compare the three volatility series.					6 hours

PROJECTS AND INTERNSHIP

(2023-2024)

B.Tech. Computer Science and Engg with Spec. in Data Science

Course Code	Course Title	L	T	P	C				
BCSE399J	Summer Industrial Internship	0	0	0	1				
Pre-requisite	NIL	Syllabus version							
		1.0							
Course Objective									
1. The course is designed so as to expose the students to industry environment and to take up on-site assignment as trainees or interns.									
Course Outcomes									
1. Demonstrate professional and ethical responsibility. 2. Understand the impact of engineering solutions in a global, economic, environmental and societal context. 3. Develop the ability to engage in research and to involve in life-long learning. 4. Comprehend contemporary issues.									
Module Content									
Four weeks of work at industry site. Supervised by an expert at the industry.									
Mode of Evaluation: Internship Report, Presentation and Project Review									
Recommended by Board of Studies	09-03-2022								
Approved by Academic Council	No. 65	Date	17-03-2022						

Course Code	Course Title	L	T	P	C					
BCSE497J	Project - I	0	0	0	3					
Pre-requisite	NIL			Syllabus version						
				1.0						
Course Objectives										
To provide sufficient hands-on learning experience related to the design, development and analysis of suitable product / process so as to enhance the technical skill sets in the chosen field.										
Course Outcomes										
<ol style="list-style-type: none"> 1. Demonstrate professional and ethical responsibility. 2. Evaluate evidence to determine and implement best practice. 3. Mentor and support peers to achieve excellence in practice of the discipline. 4. Work in multi-disciplinary teams and provide solutions to problems that arise in multi- disciplinary work. 										
Module Content										
Project may be a theoretical analysis, modeling & simulation, experimentation & analysis, prototype design, fabrication of new equipment, correlation and analysis of data, software development, applied research and any other related activities.										
Can be individual work or a group project, with a maximum of 3 students.										
In case of group projects, the individual project report of each student should specify the individual's contribution to the group project.										
Carried out inside or outside the university, in any relevant industry or research institution.										
Publications in the peer reviewed journals / International Conferences will be an added advantage.										
Mode of Evaluation: Assessment on the project - project report to be submitted, presentation and project reviews										
Recommended by Board of Studies	09-03-2022									
Approved by Academic Council	No. 65	Date	17-03-2022							

Course Code	Course Title	L	T	P	C				
BCSE498J	Project – II / Internship	0	0	0	5				
Pre-requisite	NIL				Syllabus version				
		1.0							
Course Objectives									
To provide sufficient hands-on learning experience related to the design, development and analysis of suitable product / process so as to enhance the technical skill sets in the chosen field.									
Course Outcomes									
<ol style="list-style-type: none"> 1. Formulate specific problem statements for well-defined real life problems with reasonable assumptions and constraints. 2. Perform literature search and / or patent search in the area of interest. 3. Conduct experiments / Design and Analysis / solution iterations and document the results. 4. Perform error analysis / benchmarking / costing. 5. Synthesize the results and arrive at scientific conclusions / products / solution. Document the results in the form of technical report / presentation. 									
Module Content									
<ol style="list-style-type: none"> 1. Project may be a theoretical analysis, modeling & simulation, experimentation & analysis, prototype design, fabrication of new equipment, correlation and analysis of data, software development, applied research and any other related activities. 2. Project can be for one or two semesters based on the completion of required number of credits as per the academic regulations. 3. Can be individual work or a group project, with a maximum of 3 students. 4. In case of group projects, the individual project report of each student should specify the individual's contribution to the group project. 5. Carried out inside or outside the university, in any relevant industry or research institution. 6. Publications in the peer reviewed journals / International Conferences will be an added advantage. 									
Mode of Evaluation: Assessment on the project - project report to be submitted, presentation and project reviews.

BRIDGE COURSE

(2023-2024)

B.Tech. Computer Science and Engg with Spec. in Data Science

Course Code	Course Title	L	T	P	C
BENG101N	Effective English Communication	0	0	4	2
Pre-requisite	Nil			Syllabus version	
				1.0	

Course Objectives

1. To hone LSRW skills for effective communication
2. To enhance communication skills for future career aspirations
3. To gain critical communication skills in writing and public speaking

Course Outcomes

1. Write effective sentences using appropriate grammar and vocabulary
2. Express clearly in everyday conversations with lucid pronunciation
3. Analyse the given listening inputs for effective comprehension
4. Apply different reading strategies to various texts and use them appropriately

Indicative Experiments

1.	Fundamentals of Grammar: Parts of Speech, Articles, Tenses, Sentence Structure, Types of Sentences, Subject-Verb Agreement. Activity: Exercises and worksheets
2.	Speaking for Self-Expression: Formal Self-Introduction, Expressing Oneself. Activity: Self-Introduction, Just a Minute (JAM)
3.	Basic Listening: Listening to Simple Conversations, Short Speeches/Stories. Activity: Gap fill exercises
4.	Reading Skills: Reading Strategies, Skimming and Scanning. Activity: Glaze reading, Reading comprehension, Reading newspaper articles
5.	Drafting Paragraphs: Keywords Development, Writing Paragraphs using Connectives Activity: Picture and poster interpretation
6	Vocabulary Enrichment: Synonyms and Antonyms, Prefixes and Suffixes, Word Formation, One Word Substitution, Frequently used Idioms and Phrases, Homophones and Homonyms. Activity: Crossword puzzles and worksheets
7	Listening for Pronunciation: Introduction to Phonemes, Listening to Native Speakers, Listening to Various Accents. Activity: Listening and imitating, Spell Bee
8	Interactive Speaking: Everyday Conversations, Team Interactions, Simulations. Activity: Situational role plays
9	Email and Letter Writing: Types and Format of Emails and Letters. Activity: Official e-mails and letters, personal letters
10	Reading for Comprehension: Short Stories by Indian Writers. Activity: Summarising, loud reading

Total Laboratory hours: 30 hours

Mode of assessment: Continuous assessment/ FAT/ Written assignments/ Quiz/ Oral examination / Group activity

Recommended by Board of Studies	28-06-2021		
Approved by Academic Council	No. 63	Date	23-09-2021

NON-GRADED CORE REQUIREMENT

(2023-2024)

B.Tech. Computer Science and Engg with Spec. in Data Science

Course Code	Course Title	L	T	P	C
BCSE101N	Introduction to Engineering	0	0	0	1
Pre-requisite	Nil	Syllabus version			
		1.0			

Course Objectives

1. To make the student comfortable and get familiarized with the facilities available on campus.
2. To make the student aware of the exciting opportunities and usefulness of engineering to society.
3. To make the student understand the philosophy of engineering.

Course Outcomes

1. To know the infrastructure facilities available on campus
2. To rationally utilize the facilities during their term for their professional growth
3. To appreciate the engineering principles, involve in life-long learning and take up engineering practice as a service to society

General Guidelines

1. Student should observe and involve in the activities during the induction programme. Both general activities and those which are discipline-specific should be included here.
2. Student should get familiarized with the infrastructure facilities available on campus during the general induction, school induction programme and also from the institutional website.
3. Student should attend the lecture by industries, including those on career opportunities, organized by the School and probably involve in ‘Do-it-yourself’ projects or projects involving reverse-engineering.
4. Activities under ‘Do-it-Yourself’ will be detailed by the School.
5. Student should prepare a report on the activities and observations, as per the specified format, and submit the same in institutional LMS, VTOP for further evaluation

General instruction on formatting: Document to be prepared with the titles given in the template; Arial type with font size of 12 to be used; photographs can be included in the document as per the requirement; 1.5 line spacing to be used.

Mode of Evaluation: Evaluation of the submitted report and interaction with the students

Recommended by Board of Studies **02.07.2021**

Approved by Academic Council **No. 63** Date **23.09.2021**

Course Code	Course Title	L	T	P	C
BHUM101N	Ethics and Values	0	0	0	2
Pre-requisite	Nil	Syllabus version			
		1.0			

Course Objectives

1. To understand and appreciate the ethical issues faced by an individual in profession, society and polity.
2. To understand the negative health impacts of certain unhealthy behavior.
3. To appreciate the need and importance of physical, emotional health and social health.

Course Outcomes

Students will be able to:

1. Follow sound morals and ethical values scrupulously to prove as good citizens.
2. Understand various social problems and learn to act ethically.
3. Understand the concept of addiction and how it will affect the physical and mental health.
4. Identify ethical concerns in research and intellectual contexts, including academic integrity, use and citation of sources, the objective presentation of data, and the treatment of human subjects.
5. Identify the main typologies, characteristics, activities, actors and forms of cybercrime.

Module:1 Being Good and Responsible

Gandhian values such as truth and non-violence - Comparative analysis on leaders of past and present - Society's interests versus self-interests - Personal Social Responsibility: Helping the needy, charity and serving the society.

Module:2 Social Issues 1

Harassment - Types - Prevention of harassment, Violence and Terrorism.

Module:3 Social Issues 2

Corruption: Ethical values, causes, impact, laws, prevention - Electoral malpractices; White collar crimes - Tax evasions - Unfair trade practices.

Module:4 Addiction and Health

Peer pressure - Alcoholism: Ethical values, causes, impact, laws, prevention - Ill effects of smoking - Prevention of Suicides; Sexual Health: Prevention and impact of pre-marital pregnancy and Sexually Transmitted Diseases.

Module:5 Drug Abuse

Abuse of different types of legal and illegal drugs: Ethical values, causes, impact, laws and prevention.

Module:6 Personal and Professional Ethics

Dishonesty - Stealing - Malpractices in Examinations - Plagiarism.

Module:7 Abuse of Technologies

Hacking and other cyber crimes, Addiction to mobile phone usage, Video games and Social networking websites.

		Total Lecture hours: 60 hours

6. Ministry of Home Affairs, "A Handbook for Adolescents/ Students on Cyber Safety", 2018, Government of India.			
Mode of Evaluation: Poster making, Quiz and Term End - Quiz			
Recommended by Board of Studies	27-10-2021		
Approved by Academic Council	No. 64	Date	16-12-2021

Course Code	Course Title	L	T	P	C
BSSC102N	Indian Constitution	0	0	0	2
Pre-requisite	Nil				Syllabus version
					1.0

Course Objectives

This Course is an introduction of Indian Constitution and basic concepts highlighted in this course for understanding the Constitution of India.

Course Outcomes

At the end of the course, the student will acquire:

1. A basic understanding of Constitution of India.
2. The ability to understand the contemporary challenges and apply the knowledge gained from the course to current social contemporary legal issues.
3. The understanding of constitutional remedies.

Module:1	Introduction to Indian Constitution	5 hours
-----------------	--	----------------

Introduction to the constitution of India and the Preamble - Sources of Indian Constitution - Features of Indian Constitution - Citizenship - Fundamental Rights and Duties - Directive Principles of state policy.

Module:2	Union Government and its Administration Structure of the Indian Union	8 hours
-----------------	--	----------------

Federalism, Centre- State relationship - President: Role, Power and Position – Prime Minister and Council of ministers - Cabinet and Central Secretariat - Lok Sabha - Rajya Sabha- The Supreme Court and High Court: Powers and Functions.

Module:3	State Government and its Administration	4 hours
-----------------	--	----------------

Governor- Role and Position - Chief Minister and Council of Ministers - State Legislative Assembly - State secretariat: Organization, Structure and Functions.

Module:4	Local Administration	7 hours
-----------------	-----------------------------	----------------

District's Administration Head- Role and Importance - Municipalities: Introduction, Mayor and role of Elected Representative - Panchayati Raj: Composition and Functions Evolution and 73rd and 74th Amendments - Zila Parishad and district administration: Composition and Functions Elected officials and their roles, CEO Zila Panchayat: Position and role- Panchayat Samiti: Composition and Functions - Gram Panchayat: Composition and Functions Importance of grass root democracy.

Module:5	Election Commission	6 hours
-----------------	----------------------------	----------------

Role of Chief Election Commissioner - State Election Commission - Functions of Commissions for the welfare of SC/ST/OBC and women.

Total Lecture hours:	30 hours
-----------------------------	-----------------
