MCA
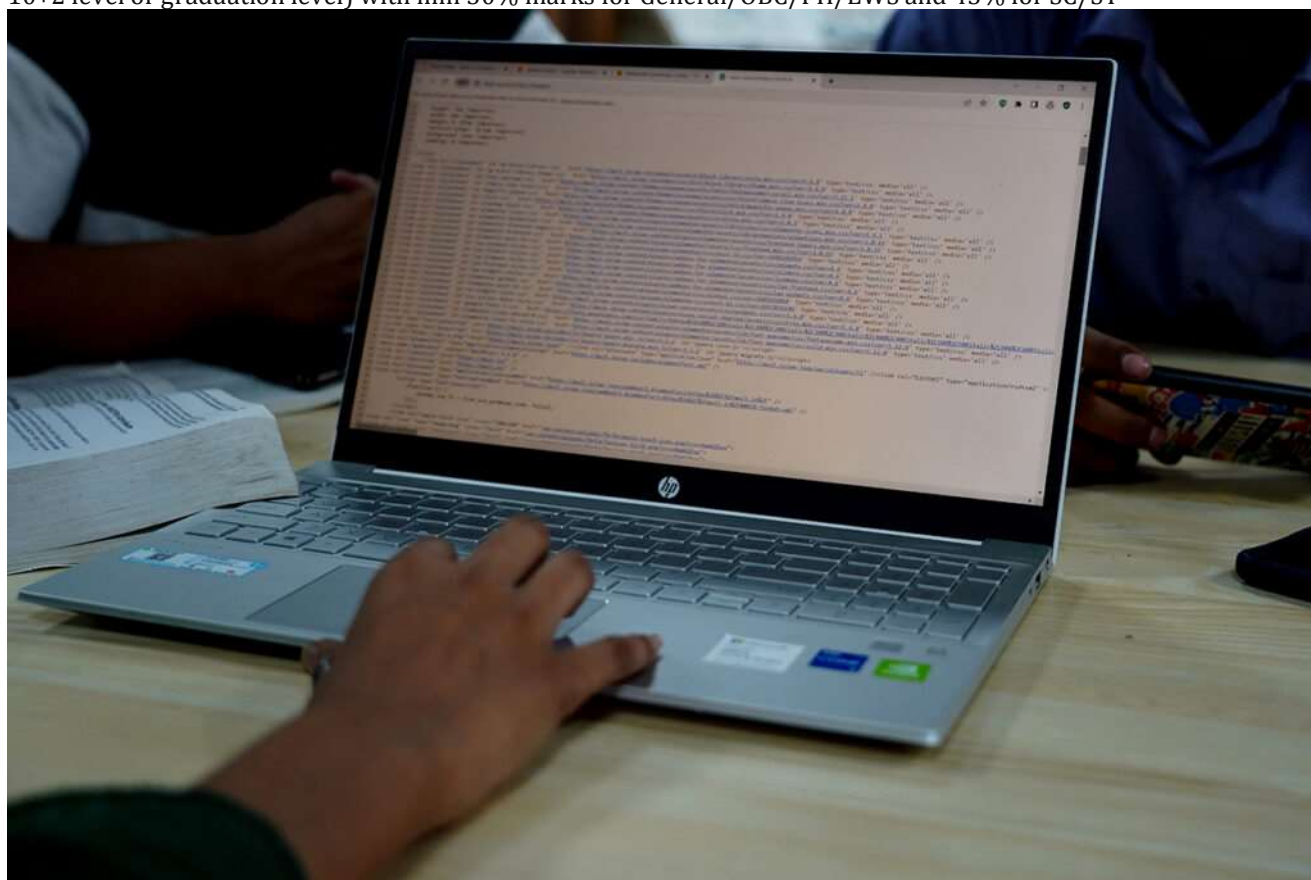

OBJECTIVE AND DESCRIPTION

Master of Computer Application (MCA) is a 2 year (4 semesters) program that emphasizes on the study and creation of business applications, rather than just programming and learning other concepts. The students are given exposure to system development in the information-processing environment, with special emphasis on Management Information Systems and Software Engineering for small and medium computer systems. Business Management Labs have been included to help students to acquire thorough knowledge of management practices in organization. New application domains subjects like ERP, Information Security and Business Intelligence have also been included in the program. Besides the basic courses pertaining to the discipline, inclusion of additional courses in Soft Skills, projects and internship helps students in their placement activities and sustaining in any organization successfully. The program provides an appropriate platform for students to help them become successful Software professionals
